1. Acknowledgements

The Independent Hospital Pricing Authority is committed to providing the Australian health care industry with a nationally consistent method of classifying all types of patients, their treatment and associated costs. Consequently, resources continue to be devoted to the ongoing development of a Diagnosis Related Groups (DRG) classification system based on local clinical practice.

DRG development would not be possible if it were not for the willing collaboration of clinicians, clinical coders, representatives from state and territory health departments, and other interested parties.

3. Introduction

3.1 Background

Diagnosis Related Groups (DRG) offer a method whereby episodes of care (for admitted hospital patients) may be categorised and measured. For this method to remain valid it needs to be modified from time to time, in line with changes to medical, surgical and coding practices (Commonwealth Department of Health and Aged Care, 1998).

Australian Refined Diagnosis Related Groups Version 6.0 (AR-DRG V6.0) was released in November 2008. During 2010 and 2011 the Australian health care system underwent significant reform, a major component of which was the introduction of national activity based funding (ABF). The Australian Government commissioned a review of the existing AR-DRG V6.0 in April 2011. The purpose of this was to ascertain its suitability for use in national ABF for public hospital inpatient services in the 2012/13 financial year. The next update version, (V7.0), was under development at the time and not due for release until late 2012.

The major outcome of this review was the recommendation that some DRG splits that had been collapsed in the transition from AR-DRG V5.2 to AR-DRG V6.0 be reinstated. These changes were accepted, and the specifications for a post-grouping application (AR-DRG V6.x) were released in September 2011.

- (a) Optional version with similar logic to AN-DRG V3.1 produced by some developers
- (b) An interim version of AR-DRG V6.0 to update some DRGs for Australian ABF purposes

This addendum provides the details of the changed DRG splits in AR-DRG V6.x. As the changes affect only a limited number of Adjacent Diagnosis Related Groups (ADRG) within four Major Diagnostic Categories (MDC), it is recommended that the AR-DRG V6.0 Definitions Manual remain the primary reference tool to understand the assignment of DRG in AR-DRG V6.x. This addendum should only be referenced to obtain information about grouping in the affected ADRGs.

3.2 Changes from AR-DRG V6.0 to AR-DRG V6.x

AR-DRG V6.x uses the Sixth Edition of ICD-10-AM/ACHI, and modifications to AR-DRG V6.0 as a baseline. The MDC names and ADRG numbering convention is the same as for AR-DRG V6.0. The changes that appear in AR-DRG V6.x are for selected DRGs (see below), and represent the reintroduction of DRG splits in AR-DRG V5.2 (see Table 3.2). Table 3.3 shows the number of DRGs for AR-DRG V6.x compared to previous versions.

MDC 09 Diseases and disorders of skin, subcutaneous tissue and breast

Splits for malignant vs non-malignant disease for J06 and J07.

MDC 14 Pregnancy, childbirth and the puerperium

- An additional patient clinical complexity level (PCCL) split for O01.
- PCCL and diagnosis splits for O60.
- Splits for gestation and PCCL for O64.
- A same day split for O66.

MDC 19 Mental diseases and disorders

- A split for mental health legal status for U61.
- A combination age and PCCL split for U63.

MDC 20 Alcohol/drug use and alcohol/drug induced organic mental disorders

A PCCL split for V60.

3.3 Guide for the use of this addendum

Assigning a DRG

This addendum must be read in conjunction with the *AR-DRG V6.0 Definitions Manual*. Together, these documents are intended to clarify the DRG assignment logic in the V6.x grouper software products.

Section five of the introduction in the *AR-DRG V6.0 Definitions Manual (Vol 1)*, provides guidance on how to use the manual to identify the likely DRG assignment for individual records. The flow chart in Figure 3.1 below provides a guide to how to use this addendum to assign DRGs when records a grouped to adjacent DRGs affected by the V6.x changes (Table 3.4).

FIGURE 3.1 Guide for the use of this addendum

^{*}Definitions Manual relates to the AR-DRG V6.0 Definitions Manual. Users should refer to section five of the introduction for details of each step.

3.4 Symbols and conventions

Symbols in Major Diagnostic Category (MDC) charts

\Diamond	A diamond indicates that a decision is being made on a single variable as opposed to a search of several variables. This symbol is used when the decision variable in the DRG structure is principal diagnosis (PDX), sex, length of stay (LOS), admission weight (AdmWt), sameday status, MHLS, urgency of admission or mode of separation. The decision is either 'yes' or 'no', and lines flowing out of the diamond indicate these paths.
	A circle indicates that a decision is being made on the basis of several variables. For example, a circle is used when all listed additional (secondary) diagnosis (ADX) are searched to determine if a CC is present and then a PCCL. A circle is also used when the decision in the DRG structure involves the presence of an OR procedure or the presence of a particular diagnosis. The decision is either 'yes' or 'no', and lines flowing out of the circle indicate these paths.
	A downward pointer indicates that the logic flow chart structure is continued on another page.
	A rectangle indicates a DRG. An asterisk (*) has been used to indicate instances where the DRG is mentioned more than once.
	A rounded rectangle indicates a Major Diagnostic Category (MDC).
	A rightward pointer refers to the next MDC.
Text boxe	S

Black reverse text boxes and box outlines denote ADRGs and DRGs respectively. For example:

ADRG 060

Refers to ADRG O60 Vaginal Delivery

DRG O60A

Refers to DRG O60A Vaginal Delivery W Catastrophic or Severe CC

Tables used for DRG definitions

DRGs are generally defined in terms of diagnosis and/or procedure codes. Each ADRG is followed by an outline of the logic used to allocate episodes within the ADRG grouping, and some of this logic refers to tables.
