Australian Coding Standards (ACS)

Page 20

Amend codes listed in ACS 0049 *Disease codes that must never be assigned*

0049 DISEASE CODES THAT MUST NEVER BE ASSIGNED

The following ICD-10-AM codes must never be assigned for inpatient morbidity coding:

…

- M99*.- Biomechanical lesions, not elsewhere classified*

…

- Y91*.- Evidence of alcohol involvement determined by level of intoxication – see also ACS 0503 Drug, alcohol and tobacco use disorders*

Pages 36 and 37

Amend wording in ACS 0042 *Procedures normally not coded*

0042 PROCEDURES NORMALLY NOT CODED

…

5. **Catheterisation:**

   - **arterial or venous** (such as Hickman's, PICC, CVC, Swan Ganz) except cardiac catheterisation (blocks [667] and [668]), surgical catheterisation (block [741]) or catheterisation in neonates (see ACS 1615 *Specific diseases and interventions for related to the sick neonate*)

   - **urinary** except if suprapubic

…

8. **Drug treatment/pharmacotherapy**

   Drug treatment should not be coded except if:

   - the substance is given as the principal treatment in same-day episodes of care

   - drug treatment is specifically addressed in a coding standard (see ACS 0044 *Chemotherapy,* ACS 1316 *Cement spacer/beads* and ACS 1615 *Specific diseases and interventions for related to the sick neonate*)

…

15. **Nasogastric intubation, aspiration and feeding,** except nasogastric feeding in neonates (see ACS 1615 *Specific diseases and interventions for related to the sick neonate*)

Page 56

Amend wording in Classification section and example 1 in ACS 0111 *Healthcare associated Staphylococcus aureus bacteraemia*

0111 HEALTHCARE ASSOCIATED *STAPHYLOCOCCUS AUREUS* BACTERAEMIA

…

CLASSIFICATION

…

U90.0 *Healthcare associated Staphylococcus aureus bacteraemia* is a supplementary code. The manifestation of the bacteraemia, such as ~~localised and/or generalised infection~~ endocarditis or sepsis, or the bacteraemia if no site is specified, together with any appropriate external cause codes should be coded according to normal coding practice and sequenced before U90.0. See also ACS 0110 *SIRS, sepsis, severe sepsis and septic shock* and ACS 1904 *Procedural complications*.

EXAMPLE 1:

A 64 year old woman was readmitted with a diagnosis of septic arthritis due to a previous internal fixation of bimalleolar left ankle fracture. Clinical documentation and ~~blood~~ cultures from joint aspiration and blood samples during this admission confirmed healthcare associated *Staphylococcus aureus* bacteraemia. Vancomycin was started and the patient received treatment for 6 weeks.

Codes:	T84.6	*Infection and inflammatory reaction due to internal fixation device [any site]*
	M00.07	*Staphylococcal arthritis and polyarthritis, ankle and foot*
	~~B95.6~~	~~*Staphylococcus aureus as the cause of diseases classified to other chapters*~~
	A49.01	*Staphylococcus aureus infection, unspecified site*
	Y83.1	*Surgical operation with implant of artificial internal device*
	Y92.22	Health service area
	U90.0	*Healthcare associated Staphylococcus aureus bacteraemia*

Page 65

Amend code alignment in ACS 0245 *Remission in malignant immunoproliferative diseases and leukaemia*

0245 REMISSION IN MALIGNANT IMMUNOPROLIFERATIVE DISEASES AND LEUKAEMIA

…

CLASSIFICATION

This standard relates only to the following categories:

C88.-   *Malignant immunoproliferative diseases*
C90.-   *Multiple myeloma and malignant plasma cell neoplasms* ~~C91.   Lymphoid leukaemia~~
C91.-   Lymphoid leukaemia
C92.-   *Myeloid leukaemia*
…

Page 93

Amend code and code title in example 1 of ACS 0604 *Stroke*

0604 STROKE

…

EXAMPLE 1:

A patient suffers a cerebral infarction on 1 January and is transferred to a rehabilitation facility on 7 January for rehabilitation for residual hemiparesis and aphasia.

Codes: I63.-   *Cerebral infarction*
            ~~G81.~~ G81.9 *Hemiplegia, unspecified*
            R47.0   Dysphasia and aphasia
            Z50.9   Care involving uses of rehabilitation procedure, unspecified

(see also ACS 2104 Rehabilitation)

0934 CARDIAC AND VASCULAR REVISION/REOPERATION PROCEDURES

…

EXAMPLE 1:

Reoperation of a femoro-popliteal bypass graft involving the removal of a stenosed section of the bypass vessel and replacement with a new interposition graft (below knee anastomosis), using saphenous vein harvested from the same leg.

Codes: 32742~~38~~-00 **[711]**   *Femoro-popliteal bypass using vein, below knee anastomosis*
                                           and
     35202-00 **[763]**   *Reoperation of arteries or veins, not elsewhere classified*

1544 COMPLICATIONS FOLLOWING ABORTION AND ECTOPIC AND MOLAR PREGNANCY

…

EXAMPLE 2:

Incomplete abortion with perforation of uterus.

Codes: O06.3   *Unspecified abortion, incomplete, with other and unspecified complications*
        ~~O08.6~~   ~~*Damage to pelvic organs and tissues following abourtion and ectopic and molar pregnancy*~~
        O71.02   *Traumatic rupture of uterus before onset of labour*
        O09.-   *Duration of pregnancy*

1617 NEONATAL SEPSIS/RISK OF SEPSIS

…

CLASSIFICATION

For those neonates who have a specific infection, such as neonatal sepsis, assign the appropriate diagnostic code, together with any associated intervention codes (as per ACS 1615 *Specific diseases and interventions ~~for~~ related to the sick neonate*). An additional code from category P00–P04 *Fetus and newborn affected by maternal factors and by complications of pregnancy, labour and delivery* may be assigned if the infection is a result of a maternal condition.

For those neonates with a diagnosis of 'risk of sepsis' and **no documented condition**, the following rules apply:

If neonate is observed only and prophylactic treatment for sepsis is not initiated, assign the appropriate code from category Z03 *Medical observation and evaluation for suspected diseases and conditions.*

If neonate is given prophylactic treatment, assign the appropriate code from category Z03 *Medical observation and evaluation for suspected diseases and conditions*, together with an appropriate code from category Z29 *Need for other prophylactic measures* and the appropriate intervention code (as per ACS 1615 *Specific diseases and interventions ~~for~~ related to the sick neonate*).

1904 PROCEDURAL COMPLICATIONS

EXAMPLE 8:
Wound infection in cholecystectomy scar, five days postoperatively, requiring antibiotic treatment.

ICD-10-AM Alphabetic Index
Infection, infected (opportunistic) B99
- postprocedural wound T81.41

Code: T81.41 *Wound infection following a procedure, not elsewhere classified*

…

EXAMPLE 21:
Wound infection in cholecystectomy scar, five days postoperatively.

ICD-10-AM Index to External Causes of Injury
Complication (delayed) (medical or surgical procedure) (of or following) Y84.9
- removal of organ (partial) (total) NEC Y83.6

Code: T81.41   *Wound infection following a procedure, not elsewhere classified*
                  Y83.6   *Removal of other organ (partial) (total)*
                  Y92.22   *Place of occurrence, health service area*

…

HOSPITAL ACQUIRED WOUND INFECTION

Definition

A wound infection in a surgical is one from which purulent material drains or is obtained. A reaction around suture material is excluded from the definition and should not be coded.

Classification

In ICD-10-AM, there is no distinction between superficial and deep wound infections, unless the infection is due to or resulting from a prosthetic device, implant or graft. Both superficial and deep wound infections are classified to T81.41 *Wound infection following a procedure, not elsewhere classified*.

EXAMPLE 26:
Postprocedural wound infection (superficial) of skin following total hip replacement. No evidence of infected prosthesis.

Codes: T81.41   *Wound infection following a procedure, not elsewhere classified*
                  Y83.1   *Surgical operation with implant of artificial internal device*
                  Y92.22   *Place of occurrence, health service area*

2104 REHABILITATION

…

EXAMPLE 1: STROKE

Patient admitted to an acute hospital for treatment of a cerebral infarction. Current deficits include hemiplegia, aphasia and urinary incontinence. On day two, the patient was commenced on a stroke rehabilitation program.

Codes:		
	I63.9	*Cerebral infarction, unspecified*
	~~G81.~~ G81.9	*Hemiplegia, unspecified*
	R47.0	*Dysphasia and aphasia*
	R32	*Unspecified urinary incontinence*
	Z50.9	*Care involving use of rehabilitation procedures*

Patient transferred one week later to a rehabilitation hospital for rehabilitation post cerebral infarction. Current deficits requiring rehabilitation include hemiplegia, aphasia and urinary incontinence.

Codes:		
	I63.9	*Cerebral infarction, unspecified*
	~~G81.~~ G81.9	*Hemiplegia, unspecified*
	R47.0	*Dysphasia and aphasia*
	R32	*Unspecified urinary incontinence*
	Z50.9	*Care involving use of rehabilitation procedures*

Patient admitted for rehabilitation for hemiplegia post cerebral infarction which occurred three years ago.

Codes:		
	G81.9	*Hemiplegia, unspecified*
	I69.3	*Sequelae of cerebral infarction*
	Z50.9	*Care involving use of rehabilitation procedures*

Page 234

Delete example 3 in ACS 2113 *Follow-up examinations for specific disorders.*

2113 FOLLOW-UP EXAMINATIONS FOR SPECIFIC DISORDERS

…

Example 2:

Patient admitted for follow-up of gastric ulcers (treated with medications). Endoscopy revealed healed ulcers, but no evidence of active ulceration.

Codes: Z09.2   *Follow-up examination after pharmacotherapy for other conditions*
                Z87.11   *Personal history of peptic ulcer disease*

EXAMPLE 3:

Patient with known metastases (pelvic and para-aortic lymph node) was admitted for follow-up of TCC of the bladder (excised six months previously). No recurrence of the bladder carcinoma was found at check cystoscopy. The metastases were not treated during the admission.

Codes: Z08.0   *Follow-up examination after surgery for malignant neoplasm*
                Z85.5   *Personal history of malignant neoplasm of urinary tract*

If the condition has recurred or a residual condition is present, code the condition as the principal diagnosis. (See also ACS 0046 *Diagnosis selection for same-day endoscopy*.)

Page 262

Amend typographical error in Standards Index under lead term *Ventilation*

Ventilation
- continuous 1006

Australian Coding Standards (ACS)

0003   SUPPLEMENTARY CODES FOR CHRONIC CONDITIONS

Codes from U78.- to U88.- are to be assigned for chronic conditions that are present on admission, however the condition does not meet the criteria for coding (as instructed in ACS 0002 *Additional diagnoses* and other general and specialty coding standards, coding conventions, and coding rules). These codes are for temporary use in Australia to generate data which will be utilised to review the coding of additional diagnoses. **The codes are mapped so as not to be included in the grouping for Diagnosis Related Group (DRG) allocation.**

There is a discrete list of chronic conditions represented in the code range U78.- to U88.-. Therefore, not all chronic conditions will be assigned a supplementary code. The supplementary codes for chronic conditions are listed in the ICD-10-AM Alphabetic Index under the pathway *Supplementary/codes for chronic conditions*.

The assignment of codes from U78.- to U88.- does not impact on the other codes that are assigned. Rather, these codes represent conditions that would normally not be included in the coded data (see Figure 1). Codes from U78.- to U88.- should be sequenced after all other ICD-10-AM codes, giving priority to the reporting of the other codes where the number of fields is limited.

Figure 1 – Flowchart of criteria for assignment of U78 to U88 *Supplementary* ~~chronic~~ *codes for chronic* ~~conditions~~ *condition*s ~~codes~~

...

CLASSIFICATION

The supplementary codes for chronic conditions are **only to be assigned** where it is evident that the condition is part of the **current health status** of the patient (see Example 1 and 2). This includes conditions that are currently medically controlled (see Example 3).

The supplementary codes are **not to be assigned**:

• in addition to another chapter code for the same condition (see Example 4)

• for a past history of a condition (see Example 5)

• for an acute condition.

Where it is unclear whether a code from U78.- to U88.- should be assigned, do not assign the code.

Note: The specific terms listed in the Alphabetic Index must be followed to inform code assignment. Except where otherwise indicated, only assign codes from this section for unspecified/NEC/NOS conditions (eg hypertension NOS) — *see Alphabetic Index/Supplementary/codes for chronic conditions.*

Australian Coding Standards (ACS)

CLASSIFICATION

The supplementary codes for chronic conditions are **only to be assigned** where ~~it is evident that~~ the condition is part of the **current health status** of the patient (see Example 1 and 2). ~~This includes conditions that are currently medically controlled (see Example 3).~~ The U codes represent chronic conditions that may be assumed to be current unless there is documentation that indicates otherwise.

The supplementary codes are **not to be assigned**:

• in addition to another chapter code for the same condition (see Example 4)

• for a past history of a condition (see Example 5)

• for an acute condition.

Where it is unclear whether a code from U78.- to U88.- should be assigned, do not assign the code.

Note: The specific terms listed in the Alphabetic Index must be followed to inform code assignment.

Except where otherwise indicated, only assign codes from this section for unspecified/NEC/NOS conditions (eg hypertension NOS) – *see Alphabetic Index/Supplementary/codes for chronic conditions*.
