6. Malignant neoplasms of ectopic tissue

Malignant neoplasms of ectopic tissue are to be coded to the site mentioned, e.g. ectopic pancreatic malignant neoplasms are coded to pancreas, unspecified (C25.9).

ICD-10-AM Tenth Edition:

Note:

1. Primary, ill-defined, secondary and unspecified sites of malignant neoplasms

Categories C76 – C80 include malignant neoplasms for which there is no clear indication of the original site of the cancer or the cancer is stated to be 'disseminated', 'scattered' or 'spread' without mention of the primary site. In both cases the primary site is considered to be unknown.

2. Functional activity

All neoplasms are classified in this chapter, whether they are functionally active or not. An additional code from Chapter 4 may be used, if desired, to identify functional activity associated with any neoplasm. For example, catecholamine-producing malignant pheochromocytoma of adrenal gland should be coded to C74.- with additional code E27.5; basophil adenoma of pituitary gland with Cushing's syndrome should be coded to D35.2 with additional code E24.0.

3. Morphology

There are a number of major morphological (histological) groups of malignant neoplasms: carcinomas including squamous (cell) and adeno-carcinomas; sarcomas; other soft tissue tumours including mesotheliomas; lymphomas (Hodgkin and non-Hodgkin); leukaemia; other specified and site-specific types; and unspecified cancers. Cancer is a generic term and may be used for any of the above groups, although it is rarely applied to the malignant neoplasms of lymphatic, haematopoietic and related tissue. 'Carcinoma' is sometimes used incorrectly as a synonym for 'cancer'.

In Chapter 2 neoplasms are classified predominantly by site within broad groupings for behaviour. In a few exceptional cases morphology is indicated in the category and subcategory titles.

For those wishing to identify the histological type of neoplasm, comprehensive separate morphology codes are provided in this volume. These morphology codes are derived from the third edition of International Classification of Diseases for Oncology (ICD-O), which is a dual-axis classification providing independent coding systems for topography and morphology. The first four digits of the morphology code identify the histological type; the fifth digit is the behaviour code (malignant primary, malignant secondary (metastatic), in situ, benign, uncertain whether malignant or benign). A sixth digit is used in ICD-O as a grading code (differentiation) for solid tumours, and is also used as a special code for lymphomas and leukaemias, however, this sixth digit is not included in ICD-10-AM.

4. Use of subcategories in Chapter 2

Attention is drawn to the special use of subcategory .8 in this chapter [see note 5]. Where it has been necessary to provide subcategories for 'other', these have generally been designated as subcategory .7.

5. Malignant neoplasms overlapping site boundaries and the use of subcategory .8 (overlapping lesion)

Categories C00 – C75 classify primary malignant neoplasms according to their point of origin. Many three character categories are further divided into named parts or subcategories of the organ in question. A neoplasm that overlaps two or more contiguous sites within a three character category and whose point of origin cannot be determined should be classified to the subcategory .8 ('overlapping lesion'), unless the combination is specifically indexed elsewhere. For example, carcinoma of oesophagus and stomach is specifically indexed to C16.0 (cardia), while carcinoma of the tip and ventral surface of the tongue should be assigned to C02.8. On the other hand, carcinoma of the tip of the tongue extending to involve the ventral surface should be coded to C02.1 as the point of origin, the tip, is known. 'Overlapping' implies that the sites involved are contiguous (next to each other).

Numerically consecutive subcategories are frequently anatomically contiguous, but this is not invariably so (eg bladder C67.-) and the coder may need to consult anatomical texts to determine the topographical relationships.

Sometimes a neoplasm overlaps the boundaries of three character categories within certain systems. To take care of this the following subcategories have been designated:

C02.8 *Overlapping lesion of tongue*
C08.8 *Overlapping lesion of major salivary glands*
C14.8 *Overlapping lesion of lip, oral cavity and pharynx*
C21.8 *Overlapping lesion of rectum, anus and anal canal*
C24.8 *Overlapping lesion of biliary tract*
C26.8 *Overlapping lesion of digestive system*
C39.8 *Overlapping lesion of respiratory and intrathoracic organs*
C41.8 *Overlapping lesion of bone and articular cartilage*
C49.8 *Overlapping lesion of connective and soft tissue*
C57.8 *Overlapping lesion of female genital organs*
C63.8 *Overlapping lesion of male genital organs*
C68.8 *Overlapping lesion of urinary organs*
C72.8 *Overlapping lesion of brain and other parts of central nervous system*

An example of this is a carcinoma of the stomach and small intestine, which should be coded to C26.8 (Overlapping lesion of digestive system).

6. Malignant neoplasms of ectopic tissue

Malignant neoplasms of ectopic tissue are to be coded to the site where they are found, eg ectopic pancreatic malignant neoplasms of ovary are coded to ovary (C56).

7. Use of the Alphabetic Index in coding neoplasms

In addition to site, morphology and behaviour must also be taken into consideration when coding neoplasms, and reference should always be made first to the Alphabetic Index entry for the morphological description.

8. Use of the third edition of International Classification of Diseases for Oncology (ICD-O)

For certain morphological types, Chapter 2 provides a rather restricted topographical classification, or none at all. The topography codes of ICD-O use for all neoplasms essentially the same three- and four- character categories that Chapter 2 uses for malignant neoplasms (C00 – C77, C80.-), thus providing increased specificity of site for other neoplasms (malignant secondary (metastatic), benign, in situ and uncertain or unknown).

It is therefore recommended that agencies interested in identifying both the site and morphology of tumours, eg cancer registries, cancer hospitals, pathology departments and other agencies specialising in cancer, use ICD-O.

ICD-10-AM Eleventh Edition:

Note:

1. **Primary, ill-defined, secondary and unspecified sites of malignant neoplasms**

Categories C76 – C80 include malignant neoplasms for which there is no clear indication of the original site of the neoplasm, or the neoplasm is stated to be 'disseminated', 'scattered' or 'spread' without mention of the primary site. If the primary site is unspecified, assign C80.9 *Malignant neoplasm, primary site unspecified*. Where a neoplasm is documented as 'unknown primary', assign C80.0 *Malignant neoplasm, primary site unknown, so stated*.

2. **Functional activity**

All neoplasms are classified in this chapter, whether they are functionally active or not. Assign an additional code from Chapter 4 to identify any documented functional activity associated with any neoplasm.

For example, catecholamine-producing malignant pheochromocytoma of adrenal gland is classified to category C74 *Malignant neoplasm of adrenal gland*, with an additional diagnosis code E27.5 *Adrenomedullary hyperfunction*; and basophil adenoma of the pituitary gland with Cushing's syndrome is classified to D35.2 *Benign neoplasm of pituitary gland* with an additional diagnosis code E24.0 *Pituitary-dependent Cushing's disease*.

3. Morphology

There are a number of major morphological (histological) groups of malignant neoplasms: carcinomas including squamous (cell) and adeno-carcinomas; sarcomas; other soft tissue tumours including mesotheliomas; lymphomas (Hodgkin and non-Hodgkin); leukaemia; other specified and site-specific types; and unspecified cancers. Cancer is a generic term and may be used for any of the above groups, although it is rarely applied to the malignant neoplasms of lymphatic, haematopoietic and related tissue. 'Carcinoma' is sometimes used incorrectly as a synonym for 'cancer'.

In Chapter 2, neoplasms are classified predominantly by site within broad groupings for behaviour. In a few exceptional cases morphology is indicated in the category and subcategory titles.

A comprehensive list of morphology codes are provided in this volume (see Appendix A). These morphology codes are derived from the third edition of International Classification of Diseases for Oncology (ICD-O-3), which is a dual-axis classification providing independent coding systems for topography and morphology. The first four digits of the morphology code identify the histological type; the fifth digit is the behaviour code (malignant primary, malignant secondary (metastatic), in situ, benign, uncertain whether malignant or benign). A sixth digit is used in ICD-O-3 as a grading code (differentiation) for solid tumours, and is also used as a special code for lymphomas and leukaemias, however, this sixth digit is not included in ICD-10-AM.

4. Use of subcategories in Chapter 2

Attention is drawn to the special use of subcategory .8 in this chapter [see note 5]. Where it has been necessary to provide subcategories for 'other', these have generally been designated as subcategory .7.

5. Malignant neoplasms overlapping site boundaries and the use of subcategory .8 (overlapping lesion)

Categories C00 – C75 classify primary malignant neoplasms according to their point of origin. Many three character categories are further divided into named parts or subcategories of the organ in question. A neoplasm that overlaps two or more contiguous sites within a three character category and whose point of origin cannot be determined is classified to the subcategory .8 ('overlapping lesion'), unless the combination is specifically indexed elsewhere. For example, carcinoma of the oesophagus and stomach is specifically indexed to C16.0 *Malignant neoplasm, cardia*, while carcinoma of the tip and ventral surface of the tongue is classified to C02.8 *Malignant neoplasm, overlapping lesion of tongue*. On the other hand, carcinoma of the tip of the tongue extending to the ventral surface is classified to C02.1 *Border of tongue*, as the point of origin, the tip, is known. 'Overlapping' implies that the sites involved are contiguous (next to each other).

Numerically consecutive subcategories are mostly anatomically contiguous, but not always (eg category C67 *Malignant neoplasm of bladder*) and the clinical coder may need to consult anatomical texts to determine the topographical relationships.

Sometimes a neoplasm overlaps the boundaries of three character categories within certain systems. To take care of this the following subcategories have been designated:

C02.8 *Overlapping lesion of tongue*
C08.8 *Overlapping lesion of major salivary glands*
C14.8 *Overlapping lesion of lip, oral cavity and pharynx*
C21.8 *Overlapping lesion of rectum, anus and anal canal*
C24.8 *Overlapping lesion of biliary tract*
C26.8 *Overlapping lesion of digestive system*
C39.8 *Overlapping lesion of respiratory and intrathoracic organs*
C41.8 *Overlapping lesion of bone and articular cartilage*
C49.8 *Overlapping lesion of connective and soft tissue*
C57.8 *Overlapping lesion of female genital organs*
C63.8 *Overlapping lesion of male genital organs*
C68.8 *Overlapping lesion of urinary organs*
C72.8 *Overlapping lesion of brain and other parts of central nervous system*

An example of this is a carcinoma of the stomach and small intestine, which is classified to C26.8 *Overlapping lesion of digestive system*.

6. Malignant neoplasms of ectopic tissue

Malignant neoplasms of ectopic tissue are classified to the site where they are found, eg ectopic pancreatic malignant neoplasms of ovary are classified to C56 *Malignant neoplasm of ovary*.)

7. **Use of the Alphabetic Index in coding neoplasms**
In addition to site, morphology and behaviour must also be taken into consideration when coding neoplasms, and reference should always be made first to the Alphabetic Index entry for the morphological description.
8. **Use of the third edition of International Classification of Diseases for Oncology (ICD-O-3)**
For certain morphological types, Chapter 2 provides a restricted topographical (site) classification or none at all. The topography codes in ICD-O-3 use essentially the same three- and four- character categories for all neoplasms (regardless of whether they are in situ, benign or malignant) that Chapter 2 assigns for malignant neoplasms (C00 – C77, C80.-), thus providing increased specificity of site for other neoplasms (malignant secondary (metastatic), benign, in situ and uncertain or unknown).

It is therefore recommended that agencies interested in identifying both the site and morphology of tumours, eg cancer registries, cancer hospitals, pathology departments and other agencies specialising in cancer, refer to ICD-O-3.

E40-E46 Malnutrition

Status of category note: *Revised – Sixth Edition*

ICD-10-AM Fifth Edition:

Note: The degree of malnutrition is usually measured in terms of weight, expressed in standard deviations from the mean of the relevant reference population. When one or more previous measurements are available, lack of weight gain in children, or evidence of weight loss in children or adults, is usually indicative of malnutrition. When only one measurement is available, the diagnosis is based on probabilities and is not definitive without other clinical or laboratory tests. In the exceptional circumstances that no measurement of weight is available, reliance should be placed on clinical evidence.

ICD-10-AM Sixth Edition:

Note: The degree of malnutrition is usually measured in terms of weight, expressed in standard deviations from the mean of the relevant reference population.

In children, when one or more previous measurements are available, lack of weight gain or evidence of weight loss is usually indicative of malnutrition. When only one measurement is available, the diagnosis is based on probabilities and is not definitive without other clinical or laboratory tests. In the exceptional circumstances that no measurement of weight is available, reliance should be placed on clinical evidence.

In adults, malnutrition includes weight loss of at least 5%, with evidence of suboptimal intake resulting in subcutaneous fat loss and/or muscle wasting.

E43 Unspecified severe protein-energy malnutrition

Status of note: *Revised – Sixth Edition*

ICD-10-AM Fifth Edition:

Severe loss of weight [wasting] in children or adults, or lack of weight gain in children leading to an observed weight that is at least 3 standard deviations below the mean value for the reference population (or a similar loss expressed through other statistical approaches). When only one measurement is available, there is a high probability of severe wasting when the observed weight is 3 or more standard deviations below the mean of the reference population.

ICD-10-AM Sixth Edition:

In children, severe loss of weight [wasting] or lack of weight gain leading to an observed weight that is at least 3 standard deviations below the mean value for the reference population (or a similar loss expressed through other statistical approaches). When only one measurement is available, there is a high probability of severe wasting when the observed weight is 3 or more standard deviations below the mean of the reference population.

In adults, BMI <18.5 kg/m² or unintentional loss of weight (≥ 10%) with evidence of suboptimal intake resulting in severe loss of subcutaneous fat and/or severe muscle wasting.

E44.0 Moderate protein-energy malnutrition

Status of note: *Revised – Sixth Edition*

ICD-10-AM Fifth Edition:

Weight loss in children or adults, or lack of weight gain in children leading to an observed weight that is 2 or more but less than 3 standard deviations below the mean value for the reference population (or a similar loss expressed through other statistical approaches). When only one measurement is available, there is a high probability of moderate protein-energy malnutrition when the observed weight is 2 or more but less than 3 standard deviations below the mean of the reference population.

ICD-10-AM Sixth Edition:

In children, weight loss or lack of weight gain leading to an observed weight that is 2 or more but less than 3 standard deviations below the mean value for the reference population (or a similar loss expressed through other statistical approaches). When only one measurement is available, there is a high probability of moderate protein-energy malnutrition when the observed weight is 2 or more but less than 3 standard deviations below the mean of the reference population.

In adults, BMI < 18.5 kg/m² or unintentional loss of weight (5-9%) with evidence of suboptimal intake resulting in moderate loss of subcutaneous fat and/or moderate muscle wasting.

E44.1 Mild protein-energy malnutrition

Status of note: Revised – *Sixth Edition*

Status of note: Revised – *Seventh Edition*

ICD-10-AM Fifth Edition:

Weight loss in children or adults, or lack of weight gain in children leading to an observed weight that is 1 or more but less than 2 standard deviations below the mean value for the reference population (or a similar loss expressed through other statistical approaches). When only one measurement is available, there is a high probability of mild protein-energy malnutrition when the observed weight is 1 or more but less than 2 standard deviations below the mean of the reference population.

ICD-10-AM Sixth Edition:

In children, weight loss or lack of weight gain leading to an observed weight that is 1 or more but less than 2 standard deviations below the mean value for the reference population (or a similar loss expressed through other statistical approaches). H54 Blindness and low vision

Note: The following table gives a classification of severity of visual impairment recommended by a WHO Study Group on the Prevention of Blindness, Geneva, 6-10 November 1972 (WHO Technical Report Series, No. 518, 1973).

The term 'low vision' in category H54 comprises categories 1 and 2 of the table, the term 'blindness' categories 3, 4 and 5, and the term 'unqualified visual loss' category 9.

If the extent of the visual field is taken into account, patients with a field no greater than 10° but greater than 5° around central fixation should be placed in category 3 and patients with a field no greater than 5° around central fixation should be placed in category 4, even if the central acuity is not impaired.

Category of visual impairment	Visual acuity with best possible correction	
	Maximum less than:	Minimum equal to or better than:
1	6/18 3/10 (0.3) 20/70	6/60 1/10 (0.1) 20/200
2	6/60 1/10 (0.1) 20/200	3/60 1/20 (0.05) 20/400
3	3/60 1/20 (0.05) 20/400	1/60 (finger counting at 1 metre) 1/50 (0.02) 5/300 (20/1200)
4	1/60 (finger counting at 1 metre) 1/50 (0.02) 5/300	Light perception
5	No light perception	
9	Undetermined or unspecified	

ICD-10-AM Sixth Edition:

H54 Visual impairment including binocular or monocular blindness

Note: The following table gives a classification of severity of visual impairment recommended by the Resolution of the International Council of Ophthalmology (2002) and the Recommendations of the WHO Consultation on 'Development of Standards for Characterisation of Vision Loss and Visual Functioning' (Sept 2003).

For characterising visual impairment for codes H54.0 to H54.3, visual acuity should be measured with both eyes open with presenting correction if any. For characterising visual impairment for codes H54.4 to H54.6, visual acuity should be measured monocularly with presenting correction if any.

If the extent of the visual field is taken into account, patients with a visual field of the better eye no greater than 10 in radius around central fixation should be placed under category 3. For monocular blindness (H54.4), this degree of field loss would apply to the affected eye.

Category	Presenting distance visual acuity	
	Worse than:	Equal to or better than:
Mild or no visual impairment 0		6/18 3/10 (0.3) 20/70
Moderate visual impairment 1	6/18 3/10 (0.3) 20/70	6/60 1/10 (0.1) 20/200
Severe visual impairment 2	6/60 1/10 (0.1) 20/200	3/60 1/20 (0.05) 20/400
Blindness 3	3/60 1/20 (0.05) 20/400	1/60 (counts fingers (CF) at 1 metre) 1/50 (0.02) 5/300 (20/1200)

Blindness	1/60 (counts fingers (CF) at 1 Light perception metre)
4	1/50 (0.02)
	5/300 (20/1200)

Blindness	No light perception
5	

9	Undetermined or unspecified
---	-----------------------------

Note: The term visual impairment in category H54 comprises category 0 for mild or no visual impairment, category 1 for moderate visual impairment, category 2 for severe visual impairment, categories 3, 4 and 5 for blindness and category 9 for unqualified visual impairment. The term "low vision" included in the previous revision has been replaced by categories 1 and 2 to avoid confusion with those requiring low vision care.

O09.0	< 5 completed weeks
O09.1	5-13 completed weeks
O09.2	14-19 completed weeks
O09.3	20-25 completed weeks
O09.4	26-33 completed weeks
O09.5	34-36 completed weeks
O09.9	Unspecified duration of pregnancy

ICD-10-AM Seventh Edition:

Note: Category O09 identifies the duration of pregnancy at admission on the mother's record and should only be assigned as an additional diagnosis with the following conditions:

- abortion (O00–O07 *Pregnancy with abortive outcome*)
- early onset of labour (O60 *Preterm labour and delivery*)
- fetal death in utero (O36.4)
- premature rupture of membranes (O42) (before 37 completed weeks of gestation)
- threatened:
 - abortion (O20.0)
 - premature labour (O47.0 *False labour before 37 completed weeks of gestation*)

ICD-10-AM Eighth Edition:

Note: 37 completed weeks refers to 36 weeks plus 7 days. Duration of pregnancy less than 37 completed weeks is deemed premature.

Category O09 identifies the duration of pregnancy at admission on the mother's record and should only be assigned as an additional diagnosis with the following conditions:

- abortion (O00–O07 *Pregnancy with abortive outcome*)
- early onset of labour (O60 *Preterm labour and delivery*)
- fetal death in utero (O36.4) (before 37 completed weeks of gestation)

ICD-10-AM Tenth Edition:

Note: Codes from this section are for use in all obstetric episodes of care where delivery is the outcome. Other abnormalities/complications classifiable elsewhere in Chapter 15 may be assigned in conjunction with codes O80–O84 to fully describe the delivery episode.

Code also the outcome of delivery (Z37.-)

ICD-10-AM Eleventh Edition:

Note: Codes from O80–O84 are assigned when delivery is completed within the episode of care (for classification purposes delivery is not complete until after expulsion of the placenta, excluding any retained portion(s), expelled or requiring removal post delivery).

Use additional code to identify outcome of delivery (Z37.-)

CLASSIFICATION AND CODING INSTRUCTIONS FOR TRANSPORT ACCIDENTS

1. If an event is unspecified as to whether it was a traffic or a nontraffic accident, it is assumed to be:
 - (a) A traffic accident when the event is classifiable to categories V10–V82 and V87.
 - (b) A nontraffic accident when the event is classifiable to categories V83–V86. For these categories the victim is either a pedestrian, or an occupant of a vehicle designed primarily for off-road use.
2. When accidents involving more than one kind of transport are reported, the following order of precedence should be used:
aircraft and spacecraft (V95–V97)
watercraft (V90–V94)
other modes of transport (V00–V89, V98–V99)
3. Where transport accident descriptions do not specify the victim as being a vehicle occupant and the victim is described as:

crushed	by any vehicle including	animal being ridden
dragged		animal-drawn vehicle
hit		bicycle

--	-----

classify the victim as a pedestrian (categories V00–V09).

4. Where transport accident descriptions do not indicate the victim's role, such as:

aeroplane		
bicycle		
boat		
bulldozer		
bus		
car		
motorcycle		
motorised tricycle		
pick-up (truck)	accident collision crash, or	NOS
recreational vehicle	wreck	
spacecraft		
streetcar		
tractor		
train		
tram		
truck		
van		
watercraft		

classify the victim as an occupant or rider of the vehicle mentioned.

If more than one vehicle is mentioned, do not make any assumption as to which vehicle was occupied by the victim unless the vehicles are the same. Instead, code to the appropriate categories V87–V88, V90–V94, V95–V97, taking into account the order of precedence given in note 2 above.

5. Where a transport accident, such as:

- vehicle (motor)(nonmotor):
- failing to make curve
 - going out of control (due to):
 - burst tyre [blowout]
 - driver falling asleep
 - driver inattention
 - excessive speed
 - failure of mechanical part

resulted in a subsequent collision, classify the accident as a collision. If an accident other than a collision resulted, classify it as a noncollision accident according to the vehicle type involved.

6. Where a transport accident involving a vehicle in motion, such as:

accidental poisoning from exhaust gas generated by breakage of any part of	vehicle in motion
--	-------------------

explosion of any part of
 fall, jump or being accidentally
 pushed from
 fire starting in
 hit by object thrown into or onto
 injured by being thrown against
 some part of, or object in
 injury from moving part of
 object falling in or on

resulted in a subsequent collision, classify the accident as a collision. If an accident other than a collision resulted, classify it as a noncollision accident according to the vehicle type involved.

7. Land transport accidents described as:

collision (due to loss of control)(on highway) between vehicle and:

abutment (bridge)(overpass)
 fallen stone
 guard rail or boundary fence
 inter-highway divider
 landslide (not moving)
 object thrown in front of motor vehicle
 safety island
 tree
 traffic sign or marker (temporary)
 utility pole
 wall of cut made for road
 other object, fixed, movable or moving

are included in:

V17.-
 V27.-
 V37.-
 V47.-
 V57.-
 V67.- and
 V77.-

ICD-10-AM Eleventh Edition:

DEFINITIONS RELATED TO TRANSPORT ACCIDENTS

...

- (s) A *railway train or railway vehicle* is any device, with or without cars coupled to it, designed for traffic on a railway.

Includes: interurban:

- electric car, operated chiefly on its own right-of-way, not open to other traffic
- streetcar, operated chiefly on its own right-of-way, not open to other traffic
- railway train, any power [diesel] [electric] [steam]:
- funicular
- monorail or two-rail
- subterranean or elevated
- other vehicle designed to run on a railway track
- vehicle operated chiefly on its own right-of-way, not open to other traffic

...

CLASSIFICATION AND CODING INSTRUCTIONS FOR TRANSPORT ACCIDENTS

1. If an event is unspecified as to whether it was a traffic or a nontraffic accident, it is assumed to be:
 - (a) A traffic accident when the event is classifiable to categories V10–V82 and V87.
 - (b) A nontraffic accident when the event is classifiable to categories V83–V86. For these categories the victim is either a pedestrian, or an occupant of a vehicle designed primarily for off-road use.

2. When accidents involving more than one kind of transport are reported, the following order of precedence should be used:
- aircraft and spacecraft (V95–V97)
 - watercraft (V90–V94)
 - other modes of transport (V00–V89, V98–V99)

3. Classify the victim as a pedestrian (categories V00–V09) where:
- transport accident descriptions do not specify the victim as being a vehicle occupant
 - the victim is described as:
 - crushed
 - dragged
 - hit
 - injured
 - killed
 - knocked down
 - run over

Includes: injury due to any type of vehicle

4. Where transport accident descriptions do not indicate the victim's role, classify the victim as an occupant or rider of the vehicle mentioned.

Includes: accident, collision, crash or wreck NOS due to vehicle

If more than one vehicle is mentioned, do not make any assumption as to which vehicle was occupied by the victim unless the vehicles are the same. Instead, code to the appropriate categories V87–V88, V90–V94, V95–V97, taking into account the order of precedence given in note 2 above.

5. Where a transport accident, such as:

- vehicle (motor)(nonmotor):
- failing to make curve
 - going out of control (due to):
 - burst tyre [blowout]
 - driver falling asleep
 - driver inattention
 - excessive speed
 - failure of mechanical part

resulted in a subsequent collision, classify the accident as a collision. If an accident other than a collision resulted, classify it as a noncollision accident according to the vehicle type involved.

6. Where a transport accident involves a vehicle in motion, and results in a subsequent collision, classify the accident as a collision. If an accident other than a collision resulted, classify it as a noncollision accident according to the vehicle type involved.

Includes: accidental poisoning from vehicle exhaust gas
breakage of any part of vehicle
explosion of any part of vehicle
fall, jump or being accidentally pushed from vehicle
fire starting in vehicle
hit by object thrown into or onto vehicle
injured by being thrown against some part of, or object in vehicle
injury from moving part of vehicle
object falling in or on vehicle

7. Land transport accidents described as:

- collision (due to loss of control) (on highway) between vehicle and any of the following objects are included in V17.-, V27.-, V37.-, V47.-, V57.-, V67.- and V77.-:
- abutment (bridge) (overpass)
 - guard rail or boundary fence
 - inter-highway divider
 - landslide (not moving)
 - object thrown in front of motor vehicle
 - safety island
 - tree

- traffic sign or marker (temporary)
- utility pole
- wall of cut rock made for road
- other object, fixed, movable or moving

Term classification:

Acriflavine
Acriflavine hydrochloride
Actinomycin
Adenosine
Albendazole
Allyloestrane
Amidefrine mesylate
Aminacrine hydrochloride (*Aminopt*)
Aminacrine pyruvate
Amlodipine (*Norvasc*)
Antithymocyte globulin (equine) (*Atgam*)
Antivenin, antivenom (sera) box jellyfish
Antivenin, antivenom (sera) funnelweb spider
Antivenin, antivenom (sera) redback spider
Antivenin, antivenom (sera) sea snake
Antivenin, antivenom (sera) snake
Antivenin, antivenom (sera) stonefish
Antivenin, antivenom (sera) tick
Atovaquone
Beclomethasone dipropionate (*Becloforte*) (*Beconase*) (*Becotide*)
Betamethasone acetate
Betamethasone dipropionate
Betamethasone sodium phosphate
Betamethasone valerate
Bretylum tosylate
Calcipotriol (*Daivonex*)
Cefpirome sulfate (*Cefrom*)
Cefpodoxime proxetil (*Orelox*)
Cephalexin (*Keflex*)
Cephmandole sodium
Cephazolin sodium
Cladribine (*Leustatin*)
Clomiphene citrate (*Clomid*)
Clorindione
Dalteparin sodium (*Fragmin*)
Danaparoid sodium (*Orgaran*)
Delapril
Dicobalt edetate (*Kelocyanor*)
Didanosine (*Videx*)
Disodium etidronate
Disodium pamidronate (*Aredia*)
Ethoglucid
Finasteride
Fludarabine phosphate (*Fludara*)
Flumethasone pivalate
Flurandrenolone
Flumazenil
Fotemustine (*Muphoran*)
Gemcitabine hydrochloride
Gestodine
Gestrinone (*Dimetriose*)
Hepatitis A immunoglobulin

Hepatitis A vaccine
 Hexamine hippurate
 Hexachlorophane
 Isosorbide mononitrat
 Lansoprazole (*Zoton*)
 Lenograstim
 Lynestrenol
 Methacycline hydrochloride (*Rodomycin*)
 Methisazone
 Milrinone lactate
 Miocamycin
 Mitozantrone hydrochloride
 Nafarelin (acetate)
 Nonoxynol 9
 Norethynodrel
 Octaphonium chloride
 Octyl methoxycinnamate
 Oestrogen, conjugated
 Oestrogen, oral contraceptive
 Oxpentifylline
 Phenethicillin benzathine
 Phenethicillin potassium
 Psyllium hydrophilic mucilloid
 Quillaia
 Rutin
 Salcatonin
 Terbinafine hydrochloride, oral
 Terbinafine hydrochloride, topical
 Trandolapril
 Trimustine

Term reclassification:

Benzhydramine (chloride)
 Benzphetamine
 Carbaril
 Chlorobutanol
 Hydroxyamphetamine
 Trichloroethylene

Status of changes to the ICD-10-AM Appendix A: MORPHOLOGY OF NEOPLASMS

Appendix A Morphology of neoplasms

Status of glossary description/definition: Revised – *Eleventh Edition*

ICD-10-AM Tenth Edition:

The third edition of the *International Classification of Diseases for Oncology* (ICD-O) was published in 2000. It contains a coded nomenclature for the morphology of neoplasms, which is reproduced here for those who wish to use it in conjunction with Chapter 2. The morphology codes listed here have been updated to align with ICD-O-3, *1 September 2011 Updates* which were valid for use from January 2012.

The morphology code numbers consist of five digits; the first four identify the histological type of the neoplasm and the fifth, following a slash or solidus, indicates its behaviour. The one digit behaviour code is as follows:

- /0 Benign
- /1 Uncertain whether benign or malignant
 - Borderline malignancy
 - Low malignant potential
 - Uncertain malignant potential
- /2 Carcinoma in situ
 - Intraepithelial
 - Noninfiltrating
 - Noninvasive
- /3 Malignant, primary site
- /6 Malignant, metastatic site
 - Malignant, secondary site
- /9 Malignant, uncertain whether primary or metastatic site

In the nomenclature given here, the morphology code numbers include the behaviour code appropriate to the histological type of neoplasm; this behaviour code should be changed if the other reported information makes this appropriate. For example, chordoma is assumed to be malignant and is therefore assigned the code number M9370/3; the term 'benign chordoma' should, however, be coded M9370/0. Similarly, superficial spreading adenocarcinoma (M8143/3) should be coded M8143/2 when described as 'noninvasive', and melanoma (M8720/3) should be coded M8720/6 when described as 'secondary'.

The following table shows the correspondence between the behaviour code and the different sections of Chapter 2:

Behaviour code	Chapter 2 categories
/0 Benign neoplasms	D10–D36
/1 Neoplasms of uncertain and unknown behaviour	D37–D48
/2 In situ neoplasms	D00–D09

/3	Malignant neoplasms, stated or presumed to be primary	C00–C76 C80–C96
/6	Malignant neoplasms, stated or presumed to be secondary	C77–C79

Occasionally a problem arises when a site given in a diagnosis is different from the site indicated by the site-specific code. In such instances, the given Chapter 2 code should be ignored and the appropriate code for the site included in the diagnosis should be used. For example, a code from category C50.- *Malignant neoplasm of breast* is added to the morphologic term 'infiltrating duct carcinoma' (M8500/3), because this type of carcinoma usually arises in the breast. However, if the term 'infiltrating duct carcinoma' is used for a primary carcinoma arising in the pancreas, the correct code would be C25.9 *Malignant neoplasm of pancreas, unspecified*.

A coding difficulty sometimes arises where a morphological diagnosis contains two qualifying adjectives that have different code numbers. An example is 'transitional cell epidermoid carcinoma'. 'Transitional cell carcinoma NOS' is M8120/3 and 'epidermoid carcinoma NOS' is M8070/3. In such circumstances, the higher number (M8120/3 in this example) should be used, as it is usually more specific. For other information about the coding of morphology see the *Australian Coding Standards*.

ICD-10-AM Eleventh Edition:

The third edition of ICD-O was published in 2000. It contains a coded nomenclature for the morphology of neoplasms, and is reproduced here to use in conjunction with Chapter 2. The morphology codes listed here were updated for consistency with ICD-O-3 (*International Classification of Diseases for Oncology Third Edition*), 1 September 2011 Updates, implemented January 2012.

ICD-10-AM morphology codes consist of the letter 'M', followed by five digits. The first four digits identify the neoplasm's histological type, and the fifth digit, following a slash (or solidus), indicates the neoplasm's behaviour. The fifth digit behaviour codes are as follows:

- /0 Benign
- /1 Uncertain whether benign or malignant
 - Borderline malignancy
 - Low malignant potential
 - Uncertain malignant potential
- /2 Carcinoma in situ
 - Intraepithelial
 - Noninfiltrating
 - Noninvasive
- /3 Malignant, primary site
- /6 Malignant, metastatic site
 - Malignant, secondary site
- /9 Malignant, uncertain whether primary or metastatic site

In the nomenclature listed here, the morphology codes include the behaviour code appropriate to the histological type of neoplasm; it is appropriate to assign a different behaviour code if supported by documentation in the clinical record. For example, chordoma is assumed to be malignant and is therefore indexed to the default morphology code M9370/3; 'benign chordoma', however, is classified to M9370/0. Similarly, superficial spreading adenocarcinoma (M8143/3) is classified to M8143/2 when documented as 'noninvasive'.

The following table shows the correspondence between the behaviour code and the different sections of Chapter 2:

Behaviour code		Chapter 2 categories
/0	Benign neoplasms	D10–D36
/1	Neoplasms of uncertain and unknown behaviour	D37–D48
/2	In situ neoplasms	D00–D09
/3	Malignant neoplasms, stated or presumed to be primary	C00–C76 C80–C96
/6	Malignant neoplasms, stated or presumed to be secondary	C77–C79

A documented neoplasm site may differ from the default site listed in the Alphabetic Index. In such instances, the listed default Chapter 2 code in the Alphabetic Index should not be assigned, and the more appropriate site specific code should be assigned from the *Neoplasm* table. For example, C69.9 *Malignant neoplasm of eye, unspecified* is the default site code listed in the Alphabetic Index with type A spindle cell melanoma (M8773/3). However, if the site of the neoplasm documented in the clinical record is specified as the choroid, assign C69.3 *Malignant neoplasm of choroid*. Similarly, infiltrating duct carcinoma (M8500/3) usually arises in the breast (classified to category C50 *Malignant neoplasm of breast*). However, if primary infiltrating duct carcinoma of the pancreas is documented in the clinical record, assign a site code from category C25 *Malignant neoplasm of pancreas*.

Where a documented morphology contains more than one qualifying term classifiable to different morphology codes, assign the morphology code with the higher number. An example is 'transitional cell epidermoid carcinoma'. 'Transitional cell carcinoma NOS' is classified to M8120/3 and 'epidermoid carcinoma NOS' is classified to M8070/3. In such circumstances, the higher number (M8120/3 in this example) is assigned, as it is usually more specific. For further information regarding the coding of morphology, see the *Australian Coding Standards*.

Chronicle of changes to ICD-10-AM

Anaphylaxis and anaphylactic shock

ELEVENTH EDITION

Background:

A number of amendments were made following a review of the classification of 'anaphylaxis and anaphylactic shock':

- Creation of a category and codes in Chapter 20 *External causes of morbidity and mortality* to classify 'exposure to or contact with allergens'
- Addition of the term 'anaphylaxis' to codes for 'anaphylactic shock'
- Minor amendments to support the changes highlighted above

Dagger and Asterisk Codes

THIRD EDITION

Background:

Following a review of the dagger (aetiology) and asterisk (manifestation) codes, Type 1 and Type 2 duplications were removed from within the dagger and asterisk system.

Definitions of Type 1 and Type 2 duplications are:

- Type 1 – Exact duplication between dagger and asterisk code
This occurs when both the dagger and asterisk code describe the aetiology and manifestation. In these instances only the dagger code needs to be assigned.
- Type 2 – Redundant asterisk code
This occurs when the dagger code sufficiently describes both the aetiology and manifestation, and the asterisk code is redundant. In these instances only the dagger code needs to be assigned.

FOURTH EDITION

Background:

A number of changes have been made to dagger and asterisk codes for consistency with changes to WHO ICD-10.

If a dagger symbol appears in a code title but there is no associated asterisk code in the code title, then all terms classifiable to that rubric are subject to dual classification, but they may have different asterisk codes assigned. Daggers have been placed adjacent to some inclusion terms, effectively changing the application of these rubrics from rule b) to rule c) of the aetiology/manifestation convention.

It is important to note that while some dagger and asterisk codes have been revised, deleted or created, specific concepts may not have been changed.

Complex regional pain syndrome

FOURTH EDITION

Background:

Complex regional pain syndrome (CRPS) type I is described as a disproportionate consequence of a trauma without nerve injury. CRPS type II is described as a disproportionate consequence of a trauma with nerve injury. *Causalgia* was reclassified as per CRPS type II. Codes for CRPS type I were also created.

Pregnancy complicated by conditions in...

SEVENTH EDITION

Background:

A proposal for improving the indexing of maternal conditions (URC 0158) was agreed to by the Update and Revision Committee (URC) of WHO Family of International Classifications, for implementation in 2005. The NCCH did not include these changes in ICD-10-AM Fifth Edition, as there were some ongoing concerns over some of the code ranges and the effect on ICD-10-AM Tabular

List. Inconsistencies between the code ranges in the Tabular List and the Alphabetic Index were highlighted by clinical coders, through general correspondence and queries. NCCH decided to implement the changes in URC 0158 for ICD-10-AM Alphabetic Index, where applicable to ICD-10-AM, and to delete the code ranges in the Tabular List.

Changes to ICD-10-AM Seventh Edition include:

- inclusion of notes at Categories O98 and O99, guiding users to the Alphabetic Index for specific code ranges
- deletion of the code ranges (inclusion terms) at the codes in categories O98 and O99
- addition of code ranges as per URC 0158 to the Alphabetic Index under *Pregnancy, complicated by, conditions in and Pregnancy, complicated by, diseases of*.

SIRS, sepsis, severe sepsis and septic shock

SEVENTH EDITION

Background:

The NCCH made changes to the classification of sepsis and septicaemia in ICD-10-AM Third Edition. Code descriptors were changed, where possible, from *septicaemia* to *sepsis*. The changes related to clarifying and standardising the definition of the terms *sepsis* and *septicaemia* and their relationship to *infection*. The Alphabetic Index was modified to ensure that *infection* classifies *localised* conditions and *sepsis* classifies *generalised* (or *systemic*) conditions. The emphasis in these changes was on the understanding of the interrelationships among systemic inflammatory response syndrome (SIRS), sepsis and infection and what clinicians meant when they used these terms.

In 2005, the Update and Revision Committee of WHOIFC, accepted a proposal from Germany for new codes for SIRS (URC 0332). As there were three more draft proposals for change at that time; changing terminology from *septicaemia* to *sepsis*, *severe sepsis* and *septic shock*, the NCCH decided to withhold making any changes to ICD-10-AM and the ACS until all changes had been approved by the URC. These proposals were accepted in 2008 and included for updates to ICD-10-AM Seventh edition.

Changes made to Seventh Edition included:

- amendments to ICD-10-AM Tabular List and Alphabetic Index as per URC updates (0332, 1238, 1239 and 1240) with the exception of R65.9 *Systemic inflammatory response syndrome, unspecified*
- addition of the term *acute* to the concept of *organ failure* to the codes in category R65 *Systemic Inflammatory response syndrome* [SIRS] together with *use additional code* notes at the appropriate codes in this category to identify the type of acute organ failure
- amendment of the title of ACS 0110 to *Sepsis, severe sepsis and septic shock* and the addition and updating of clinical and classification advice for these concepts
- addition of *use additional code* notes at R65.1 and R65.3 to identify the type of acute organ failure, when present
- Addition of *use additional code* note to relevant codes in category O00–O08 *Pregnancy with abortive outcome* to identify *shock*, when present

0110 Sepsis, severe sepsis and septic shock

NINTH EDITION

Background:

Numerous queries and public submissions were received in relation to the classification of SIRS and sepsis, which highlighted the advice in ACS 0110 *Sepsis, severe sepsis and septic shock* is ambiguous and inconsistent. Consequently, the standard and ICD-10-AM codes for SIRS, sepsis, severe sepsis and septic shock were reviewed for the Ninth Edition. The review was conducted in consultation with clinicians to confirm clinical currency and with the ICD Technique Group to ensure the accuracy and usefulness of coding guidelines.

The major changes to Ninth Edition included:

- Added R65.0 *Systemic inflammatory response syndrome [SIRS] of infectious origin without acute organ failure* to the list of **'Disease codes that must never be assigned'** as the concept of SIRS due to infectious origin is the same as sepsis, a condition already classifiable in ICD-10-AM across different chapters.
- Amended code title R65.1 to **Severe sepsis** for clarity
- Combined T81.41 *Wound infection following a procedure* and T81.42 *Sepsis following a procedure* to the fourth character level and amended the code title of T81.4 to *Wound infection following a procedure, not elsewhere classified*
- Added 'use additional code' notes at the following codes, to be consistent with classification advice in ACS 0110 *SIRS, sepsis, severe sepsis and septic shock*, which advises that sepsis classifiable to the following codes should have an additional code from A40-A41 assigned to identify the type of sepsis:
 - O03–O07 *Pregnancy with abortive outcome*
 - O08.0 *Genital tract and pelvic infection following abortion and ectopic and molar pregnancy*
 - O75.3 *Other infection during labour*
 - O85 *Puerperal sepsis*
 - T80.2 *Infections following infusion, transfusion and therapeutic injection*
 - T81.4 *Wound infection following a procedure, not elsewhere classified*
 - T82.6 *Infection and inflammatory reaction due to cardiac valve prosthesis*
 - T82.7 *Infection and inflammatory reaction due to other cardiac and vascular devices, implants and grafts*
 - T83.5 *Infection and inflammatory reaction due to prosthetic device, implant and graft in urinary system*
 - T83.6 *Infection and inflammatory reaction due to prosthetic device, implant and graft in genital tract*
 - T84.5 *Infection and inflammatory reaction due to internal joint prosthesis*
 - T84.6 *Infection and inflammatory reaction due to internal fixation device [any site]*
 - T84.7 *Infection and inflammatory reaction due to other internal orthopaedic prosthetic devices, implants and grafts*
 - T85.7 *Infection and inflammatory reaction due to other internal prosthetic devices, implants and grafts*
- Added 'use additional code' notes to relevant codes to identify severe sepsis or septic shock, when present
- Added a note at B95–B97 *Bacterial, viral and other infectious agents* to indicate that it is not necessary to assign a code from B95-B97 *Bacterial, viral and other infectious agents* if the same agent has been identified in the infection code (e.g. streptococcal sepsis in A40.-)

- Added an ACS 0110 symbol at Chapter 1 *Certain infectious and parasitic diseases (A00-B99)* and at P36.- *Bacterial sepsis of newborn due to Staphylococcus aureus*
- Added *sepsis* as a subterm to relevant entries in the Alphabetic Index where septicaemia is present
- Amended the Alphabetic Index for the classification of the terms urosepsis and SIRS
- Amended the title of ACS 0110 to specify **SIRS, sepsis, severe sepsis and septic shock** and updated clinical and classification advice for these concepts
- Revised advice in ACS 1904 *Procedural complications* regarding to the classification of vascular catheter related infection OR infusion/transfusion related infection

Type 1 and type 2 Excludes notes

TENTH EDITION

Background:

Many of the *Excludes* notes in ICD-10 were included to support navigation of the Tabular List prior to the development of the Alphabetic Index. Others support ICD-10's original purpose of mortality coding. It was never the intent in ICD-10 that *Excludes* notes be universally disregarded. The concept of type 1 and type 2 *Excludes* notes was an ICD-9-CM convention which was difficult to understand and apply in ICD-10-AM.

A revision was made to the coding conventions with respect to *Excludes* notes and the principle of 'translating medical statements' into code.

There was also a review of *Excludes* notes at the chapter level with removal of unnecessary or redundant *Excludes* notes.

WHO ICD-10 Updates 2005

SIXTH EDITION

Background:

The WHO approved a number of changes for ICD-10 at the annual meeting in Tokyo in 2005. The changes ratified at that meeting have been included in ICD-10-AM/ACS Sixth Edition, with some modifications.

The main changes include:

New codes:

- [A09.0](#) *Other gastroenteritis and colitis of infectious origin*
- [A09.9](#) *Gastroenteritis and colitis of unspecified origin*
- [B17.9](#) *Acute viral hepatitis, unspecified*
- [D68.5](#) *Primary thrombophilia*

- [K52.3](#) *Indeterminate colitis*

Inactivated codes:

- [K51.1](#) *Ulcerative (chronic) ileocolitis*

****Note:** new ICD-10 codes for systemic inflammatory response syndrome have not been included in ICD-10-AM Sixth Edition. Further work on sepsis is underway in the Morbidity Reference Group and as refinement of the codes is expected, NCCH agreed to wait for these changes.

New terminology:

- [decubitus ulcer and pressure area](#)
- keratopathy following cataract surgery
- ulcerative colitis

Changed classification:

- benign neoplasms of prostate (adenoma, fibroma, fibroadenoma and myoma).

Amendments to the [Drugs_Chemicals](#):

- phenazopyridine (reclassified)
- wood preservative (added)

A number of changes have also been made to inclusion terms, includes and excludes notes and instructional notes in ICD-10-AM Tabular List and improvements have been made to the Alphabetic Index for a number of conditions, including improved indexing for:

WHO ICD-10 Updates 2006

SIXTH EDITION

Background:

The WHO approved a number of changes for ICD-10 at the annual meeting in Tunis in 2006. The changes ratified at that meeting were included in ICD-10-AM/ACS Sixth Edition, with some modifications.

The main changes include:

New codes:

- **H54.9** *Unspecified visual impairment*
- **I98.2*** *Oesophageal varices without mention of bleeding in diseases classified elsewhere*
- **I98.3*** *Oesophageal varices with bleeding in diseases classified elsewhere*
- **O60.3** *Preterm delivery without spontaneous labour*
- **R26.3** *Immobility*

New terminology:

- visual impairment, binocular and monocular (**H54**)
- *pneumocystis jirvecii* (**B59†**)

Changed classification:

- Stransky-Regalia type anaemia (D58.2)

Amendments to the **Drugs_Chemicals**:

- deoxybarbiturates
- IV methylprednisolone
- protozoal vaccine
- sodium warfarin

A number of changes have also been made to inclusion terms, includes and excludes notes and instructional notes in ICD-10-AM Tabular List and improvements have been made to the Alphabetic Index for a number of conditions, including improved indexing for:

WHO ICD-10 Updates 2007

SEVENTH EDITION

Background:

The WHO approved a number of changes for ICD-10 at the annual meeting in Trieste in 2007. The changes ratified at that meeting were included in ICD-10-AM/ACS Seventh Edition, with some modifications.

The main changes include:

New codes:

- C79.9 *Secondary malignant neoplasm, unspecified site*
- C80.0 *Malignant neoplasm, primary site unknown, so stated*
- C80.9 *Malignant neoplasm, unspecified*
- E88.3 *Tumour lysis syndrome*

I72.5 *Aneurysm and dissection of other precerebral arteries*
N42.3 *Dysplasia of prostate*

Expansion of categories:

Deaths from obstetric causes and sequelae of obstetric causes (O97)
Victim of earthquake, to uniquely identify victims of tsunami (X34)

New terminology in the area of:

Aneurysms, to include the concept of dissection
Maltreatment
Subsequent myocardial infarction

Change of classification for:

K35 *Acute appendicitis*:

- K35.0, K35.1 and K35.9 inactivated
- K35.2, K35.3 and K35.8 created to replace inactivated codes
- to separate and clarify the concepts of acute appendicitis with *generalised* and *localised peritonitis*.

A *use additional codes* note was added to the fourth character .6 *amnesic syndrome* at F10-F19 to clarify that E51.2+ and G32.8* should be assigned as additional codes when these conditions are *associated with Wernicke's disease or syndrome*.

The code title of G73.1* was amended and the dagger code range extended to clarify that this code should be assigned with any relevant neoplasm code from C00-D48.

The code title of category I72 was amended to include the concept of *dissection*, however, the excludes note was amended to clarify that *congenital dissection of precerebral artery* is classified to Q28.1. The code titles of I72.0-I72.9 were also amended to include the term *dissection* and a code was created; I72.5 *Aneurysm and dissection of other precerebral arteries*.

The code title of L91.0 was changed to *Hypertrophic scar* (previously the inclusion term) and the inclusion term was changed to *keloid scar* (previously the code title). L91.00, L91.01 and L91.09 had the term *hypertrophic scar* added to their code titles, for consistency with the amended category title.

The term *irritable hip* was reclassified from M24.8 *Other specific joint derangements, not elsewhere classified* to M65.8 *Other synovitis and tenosynovitis*.

Fourth character codes were created at O96 *Death from any obstetric cause occurring more than 42 days but less than one year after delivery* to specify death from *direct, indirect* and *unspecified* obstetric cause.

The code title of O97 *Death from sequelae of obstetric causes* was amended to remove the term *direct* and fourth character codes were created to specify death from sequelae of *direct, indirect* and *unspecified* obstetric cause. A *use additional code* note was also added at the category level to identify (direct or indirect) *obstetric cause of death*.

A definition and excludes note was added to P08.1 to clarify when this code should be assigned.

The term *syndromes* was removed from code and category titles at Y07.

WHO ICD-10 Updates 2009

EIGHTH EDITION

Background:

HERNIA UPDATE

In 2009, the Update and Revision Committee of WHO-FIC accepted a proposal from Sweden for changes to the classification of hernia. The proposal

recommended a distinction should be made between secondary hernias (such as incisional hernia, parastomal hernia) and primary hernias, as the mechanism and the optimum management of these two types of hernia may differ. The modification to the classification would facilitate a more comprehensive evaluation of the risks and prognosis of diverse new surgical techniques and methods of treatment of hernia.

The WHO approved a number of changes for ICD-10 at the annual meeting in Seoul in 2009. The changes ratified at that meeting were included in ICD-10-AM Eighth Edition.

New codes for:

- K43.2 *Incisional hernia without obstruction or gangrene*
- K43.3 *Parastomal hernia with obstruction, without gangrene*
- K43.4 *Parastomal hernia with gangrene*
- K43.5 *Parastomal hernia without obstruction or gangrene*
- K43.6 *Other and unspecified ventral hernia with obstruction, without gangrene*
- K43.7 *Other and unspecified ventral hernia with gangrene*

Revised code title descriptions:

- K43.0 *Incisional hernia with obstruction, without gangrene*
- K43.1 *Incisional hernia with gangrene*
- K43.9 *Other and unspecified ventral hernia without obstruction or gangrene*

RESISTANCE TO ANTIMICROBIAL AND ANTINEOPLASTIC DRUGS UPDATE

In 2009, the Update and Revision Committee of WHO-FIC accepted a proposal from Canada and updated ICD-10 to include resistance to a wide variety of antimicrobial drugs and antineoplastic agents.

With widespread resistance due to indiscriminate usage of antimicrobial drugs especially for the treatment of malaria, tuberculosis and HIV viruses it is timely that the classification is updated. The update will provide codes to specify resistance to the various antimicrobial and antineoplastic drugs.

Please note that WHO ICD-10 classifies bacterial agents resistant to antibiotics in U80 – U89 of Chapter XXII *Codes for special purposes* while ICD-10-AM classifies them to category Z06.- *Bacterial agents resistant to antibiotics*.

ICD-10-AM

- Tabular List
 - Amend title of third character level category code Z06 to *Resistance to antimicrobial drugs*
 - Delete fourth character level category codes Z06.3 *Agent resistant to penicillin and related antibiotics*, Z06.4 *Agent resistant to vancomycin and related antibiotics* and Z06.9 *Agent resistant to other and unspecified antibiotics* and their related fifth character level codes:
 - Z06.31 *Penicillin resistant agent*
 - Z06.32 *Methicillin resistant agent*
 - Z06.39 *Agent resistant to other penicillin related antibiotic*
 - Z06.41 *Vancomycin resistant agent*
 - Z06.42 *Agent resistant to other vancomycin related antibiotic*
 - Z06.90 *Agent resistant to unspecified antibiotic*
 - Z06.99 *Agent resistant to other single specified antibiotic*
 - Create fourth character level category code Z06.5 *Resistance to beta-lactam antibiotics* with the following fifth character level codes:
 - Z06.50 *Resistance to beta-lactam antibiotics, unspecified*
 - Z06.51 *Resistance to penicillin*

OTHER UPDATES

The WHO also approved a number of changes for inclusion into ICD-10 at the annual meeting in Seoul, 2009. The changes ratified at the meeting were incorporated in ICD-10-AM Eighth Edition, with some modifications.

The main changes include:

New codes for:

Aneurysm and dissection of vertebral artery
Dental caries with pulp exposure

Expansion of category:

Sudden infant death syndrome
Type I and type II respiratory failure

New terminology in the area of:

Immune reconstitution inflammatory syndrome [IRIS]
Coronary slow flow syndrome
Malignant immunoproliferative diseases
Influenza due to certain identified influenza virus
Pre-eclampsia and pre-eclampsia superimposed on chronic hypertension

Change of classification for:

Functional dyspepsia
Poisoning by helium, nonmedicinal
Obstetric laceration of mid or upper third of vaginal wall

Improved indexing for:

Cat eye syndrome
Rasmussen encephalitis or syndrome
March fracture
Nasoalveolar/Nasolabial cyst

Hydrocele
Monoclonal macroglobulinaemia
Apocrine metaplasia
Schuller-Christian disease or syndrome
Telangiectasia

WHO ICD-10 Updates 2010

EIGHTH EDITION

Background:

In 2010, the Update of Revision Committee (URC) of WHO-FIC (WHO Family of International Classification) approved a number of changes to the ICD-10 Tabular List and Alphabetic Index at the annual meeting in Toronto. These changes have been incorporated into ICD-10-AM Eighth Edition, with some modifications.

The main changes include:

Expansion of categories:

- I48 *Atrial fibrillation and flutter* for increased specificity to reflect current terminology

Creation of new reserve codes for immediate international use:

- U06.- *Emergency use of U06.-*
 - U07.- *Emergency use of U07.-*
- (see tabular changes below for WHO definition of these codes)

Addition of new codes for:

- I48.0 *Paroxysmal atrial fibrillation*
- I48.1 *Persistent atrial fibrillation*
- I48.2 *Chronic atrial fibrillation*
- I48.3 *Typical atrial flutter*
- I48.4 *Atypical atrial flutter*
- I48.9 *Atrial fibrillation and atrial flutter, unspecified*
- W17.5 *Fall from mobile elevated work platform [MEWP]*

New terminology in the area of:

- C88 *Malignant immunoproliferative diseases*

Change of classification for:

- progressive supranuclear palsy (G23.1)
- lupoid hepatitis (K75.4)
- dermatitis gangrenosa
- Mediterranean fever (A23.9)
- Lymphomatoid papulosis to C86.6 (previously classified to L41.2)

Improved indexing for:

- IIAC (idiopathic infantile arterial calcification)
- diarrhoea due to *Clostridium difficile*
- drug induced gastroenteritis and colitis
- AV nodal re-entrant tachycardia (AVNRT)

- Hepatogenous diabetes
- Infection due to internal joint prosthesis
- Infection of skin
- Neoplasm of urethrovaginal septum

WHO ICD-10 Updates 2010: Haemorrhoids

EIGHTH EDITION

Background:

In 2010, the Update and Revision Committee of WHO-FIC accepted a proposal from Sweden for changes to the classification of haemorrhoids. The proposal recommended that in order to reflect a change in clinical terminology, *haemorrhoids* are more appropriately classified to Chapter 11 *Diseases of the digestive system* rather than its current classification to Chapter 9 *Diseases of the circulatory system*.

The following amendments were made to ICD-10-AM for Eighth Edition:

- Tabular List
 - Deleted block I84 *Haemorrhoids*
 - Created block K64 *Haemorrhoids and perianal venous thrombosis* with codes:
 - K64.0 *First degree haemorrhoids*
 - K64.1 *Second degree haemorrhoids*
 - K64.2 *Third degree haemorrhoids*
 - K64.3 *Fourth degree haemorrhoids*
 - K64.4 *Residual haemorrhoidal skin tags*
 - K64.5 *Perianal venous thrombosis*
 - K64.8 *Other specified haemorrhoids*
 - K64.9 *Haemorrhoids, unspecified*
 - Amended three character categories to "(K55–K64)"
 - Amended excludes note at K62 for haemorrhoids from "I84.-" to "K64.-"
 - Amend category code titles of O22 and O87 to include "...complications and haemorrhoids in..."
 - Amended excludes note code ranges at O99.4 for "venous complications and cerebrovenous sinus thrombosis in labour, childbirth and puerperium" from "O87.-" to "O87.0–O87.1, O87.3–O87.9" and "venous complications and cerebrovenous sinus thrombosis in pregnancy" from "O22.-" to "O22.0–O22.3, O22.5–O22.9"
 - Amend excludes note at O99.6 to include "haemorrhoids in labour, childbirth and puerperium (O87.2)" and "haemorrhoids in pregnancy (O22.4)"
 - Tabulation List for Morbidity: amended for Haemorrhoids: I84 to K64
- Alphabetic Index: appropriate changes made to support the above amendments

EIGHTH EDITION

Background:

The WHO approved a number of changes for inclusion into ICD-10 at the annual meeting in Cape Town 2011. The changes ratified at the meeting were incorporated in ICD-10-AM Eighth Edition, with some modification.

The main changes that have been made to ICD-10-AM Eighth Edition include:

New terminology in the area of:

- Kimura disease
- Acute non-viral hepatitis
- Overactive bladder
- Reticular erythematous mucinosis

Change of classification for:

- Acute appendicitis with peritonitis
- Klatzkin's tumour
- Angiocentric immunoproliferative lesion
- Coccyeal body or glomus neoplasm
- Eyeball/intraocular neoplasm

NINTH EDITION

Background:

The WHO approved a number of changes for inclusion into ICD-10 at the annual meeting in Brasilia 2012. The changes ratified at the meeting were incorporated into ICD-10-AM Ninth Edition, with some modification.

WHO URC updates (2011 & 2012) also revised the classification of neoplasms of eyeball, which highlighted the need to correct anomalies in the classification of neoplasms of iris, lens, and sclera (e.g. naevus of iris, melanoma of iris). Currently both benign and malignant neoplasms of iris, lens and sclera are classified to neoplasm of ciliary body. This classification is anatomically incorrect. New codes were created for other specified parts of the eye to classify neoplasms that originate in the sites specified above.

The following changes have been included for ICD-10-AM Ninth Edition:

Change of classification for:

- Subdural haemorrhage
- Acute infectious hepatitis NOS
- Histiocytic medullary reticulosis
- Transient hypertension of pregnancy
- Microcystic adenoma of pancreas
- External cause code for 'aspiration NOS'

- Neoplasms of iris, lens, and sclera

Improved indexing for:

- Osteonecrosis of jaw (drug-induced) (radiation-induced)
- Necrosis of cornea
- Cervical lateral cyst
- Melanocytoma of eyeball
- Status of cardiac resynchronisation therapy defibrillator (CRT-D)
- Status of cardiac resynchronisation therapy pacemaker (CRT)

NINTH EDITION

Background:

The WHO approved a number of changes for inclusion into ICD-10 at the annual meeting in Beijing 2013. These changes have been incorporated into ICD-10-AM Ninth Edition, with some modifications.

The following changes were made:

Expansion of categories:

- Creation of fourth character subdivisions at W26 *Contact with other sharp object(s)*

Addition of new codes for:

- Excessive and redundant skin and subcutaneous tissue
- Personal history of female genital mutilation
- Locked-in syndrome

Change of classification for:

- Dengue fever
- Coronary artery dissection
- Long QT syndrome
- Systolic murmur NOS
- Endometrial thickening
- Castleman's disease
- Meige's syndrome
- Ogilvie syndrome
- Laennec's cirrhosis
- Post-immunisation, post-transfusion hepatitis

New terminology:

- Apparent life threatening event
- Basal cell papilloma
- Levator ani syndrome
- Thoracic endometriosis syndrome
- Meige disease
- Meige-Milroy disease (chronic hereditary oedema)
- Very long chain acyl-CoA dehydrogenase (VLCAD) deficiency

- Manic depression
- Redundant colon

Index improvements for:

- Syphilitic arthropathy
- Calculus with cystitis
- Sudden adult death syndrome
- Telangiectatic focal nodular hyperplasia of liver
- SSRI (selective serotonin reuptake inhibitor) in the drug and chemical table

Background:

In 2013, the URC of WHO-FIC approved an update to ICD-10 at the annual meeting in Beijing to classify unstable INR, abnormal coagulation and prothrombin time. Additionally, Australia published coding rules regarding admission for subtherapeutic INR and bridging therapy for temporary cessation of an anticoagulant. These changes have been included into:

- the Tabular List with creation of five character codes at R79.8 *Other specified abnormal findings of blood chemistry*
- a revision of ACS 0303 *Abnormal coagulation profile due to anticoagulants*
- minor amendments to support the above.

WHO ICD-10 Updates 2014

TENTH EDITION

Background:

In 2014, the URC of WHO-FIC approved a number of changes to the Tabular List and Alphabetical Index of ICD-10 at the annual meeting in Barcelona. These changes were incorporated into ICD-10-AM Tenth Edition, with some modifications.

- Neonatal diarrhoea NOS
 - Classified to A09.9 *Gastroenteritis and colitis of unspecified origin*
- Sepsis due to enterococcus
 - The term 'enterococcus' was added to A40.2; A49.1; B95.2
- *Neorickettsia sennetsu* [*Ehrlichia sennetsu*]
 - New terminology added
- Severe fever with thrombocytopenia syndrome [SFTS]
 - New terminology added
- Acute hepatitis B (viral) NOS
 - Classified to B16.9 *Acute hepatitis B without delta-agent and without hepatic coma*
- Carrier of viral hepatitis

- Z22.5 *Carrier of viral hepatitis status* inactivated; B17.0 *Acute delta-(super) infection of hepatitis B carrier* was also inactivated as it contained the concept of 'carrier'.
- Hepatitis B (viral) NOS
 - Classified to B18.1 *Chronic viral hepatitis B without delta-agent*
- Tinea inguinalis [Tinea cruris]
 - New terminology added
- Malignant neoplasms of ectopic tissue
 - Amendment of the definition in the Note (point 6) at the beginning of Chapter 2 *Neoplasms*
- Multiple system atrophy
 - code created to classify G23.3 *Multiple system atrophy, cerebellar type [MSA-C]* with the title of G23.2 amended to classify *Multiple system atrophy, parkinsonian type [MSA-P]*. G90.3 *Multi system degeneration* was inactivated as the concept has been expanded in G23.3 and G23.2
- Neurogenic orthostatic hypotension
 - The URC update to this area of the classification proposed adding the inclusion term Neurogenic orthostatic hypotension [Shy-Drager] and an excludes note for orthostatic hypotension NOS (I95.1) at G23.8 Other specified degenerative diseases of basal ganglia. However upon review it was highlighted that Shy-Drager syndrome is outdated terminology. In 2007 the Consensus Committee representing the American Autonomic Society and the American Academy of Neurology redefined it as multiple system atrophy with autonomic phenomena.
Further review of neurogenic orthostatic hypotension (NOH) revealed that it is a subtype of orthostatic hypotension caused by underlying neurologic disorders that affect a specific part of the autonomic nervous system. Therefore, ACCD retained G23.8 without the proposed URC changes and indexed the legacy term *Shy-Drager syndrome* with a cross reference to multiple system atrophy. *Orthostatic hypotension* was expanded as I95.10, I95.11, I95.12 and I95.19 for specificity after review of the ICD-11-beta draft.
- Haddad syndrome
 - an index entry was added for Haddad syndrome (a rare congenital disorder in which congenital central hypoventilation syndrome (CCHS) or Ondine syndrome, which occurs concurrently with Hirschsprung disease)
 - congenital central hypoventilation syndrome is classifiable to P28.3 *Primary sleep apnoea of newborn* (as it is predominantly seen in newborns), and codes for both CCHS and Hirschsprung's disease if present may be assigned in accordance with ACS 0001 *Principal diagnosis*, ACS 0002 *Additional diagnoses* and ACS 0005 *Syndromes*.
- Binocular blindness
 - Minor amendment to the inclusion term at H54.0 *Blindness, binocular*
- Ischaemic cerebral infarction (stroke) (accident) and tachyarrhythmia
 - Indexing amendments
- Cerebral infarction
 - Minor amendment to the inclusion term at I63 *Cerebral infarction*
- Influenza due to identified zoonotic or pandemic influenza virus
 - The titles of J09 was amended to add new terminology
 - The title of J10 was retained, but an inclusion term was added for new terminology
 - To assist clinical coders with classification of zoonotic and pandemic influenza viruses, an ACS was created with definitions and classification advice for J09. However, as virus strains change from pandemic to seasonal and a pandemic can emerge quickly, the classification must be able to react to instructions from WHO swiftly. Therefore, ACCD proposes managing the classification of specific virus strains for J09 *Influenza due to identified zoonotic or pandemic influenza virus* through Coding Rules (and possibly errata) which can be published as required.

- Psychological and behavioural factors associated with irritable bowel syndrome
 - The Glossary description at F54 *Psychological and behavioural factors associated with disorders or diseases classified elsewhere* was amended to replace the term 'mucous colitis' with 'irritable bowel syndrome'
- Obstetric death
 - Amendments were made to O94, O96 and O97 to clarify:

O95 *Obstetric death of unspecified cause*; is assigned when a woman dies during pregnancy, childbirth or the puerperium, and the cause is not specified

O96 *Death from any obstetric cause occurring more than 42 days but less than one year after delivery*; is assigned for death from an obstetric cause that occurs after 42 days but less than one year from the delivery

O97 *Death from obstetric causes, one year or more after delivery*; is assigned for death from any obstetric cause that occurs one year or more from the delivery.
 - O94 *Sequelae of complication of pregnancy, childbirth and the puerperium*; minor amendments were made to the *Note* and *Excludes* note
- Renal vein thrombosis
 - Code created to classify P29.83 *Embolism and thrombosis of renal vein in newborn*
- Acquired hydrocephalus of newborn
 - Code created to differentiate acquired (P91.7) and congenital (Q03.-) hydrocephalus of newborn
- Abdominal compartment syndrome
 - Code created to classify R19.81 *Abdominal compartment syndrome*
- Superficial injury to epiglottis
 - reclassified from 'superficial injury to other part of neck' to 'superficial injury to larynx'
- Smoke inhalation NOS
 - Classified to X09 *Exposure to unspecified smoke, fire and flames*

WHO ICD-10 Updates 2015 and 2016

ELEVENTH EDITION

Background:

In 2015 and 2016, the URC of WHO-FIC approved a number of changes to the Tabular List and Alphabetical Index of ICD-10 at the annual meetings in Manchester (2015) and Tokyo (2016). These changes were incorporated into ICD-10-AM Eleventh Edition, with some modifications:

- Creation of B48.5† *Pneumocystosis* (J17.2*) to replace B59† *Pneumocystosis* (J17.3*)

- Creation of G94.3* *Encephalopathy in diseases classified elsewhere*
- Removal of the terms (site) 'and duodenum' from K31.81 *Angiodysplasia of stomach without mention of haemorrhage* and K31.82 *Angiodysplasia of stomach with haemorrhage* (concept reclassified to category K55.3 *Angiodysplasia of small intestine*)
- Creation of K55.3 *Angiodysplasia of small intestine*
- Deletion of M31.2 *Lethal midline granuloma*
- Creation of M75.6 *Tear of labrum of degenerative shoulder joint*
- Creation of P76.3 *Volvulus of newborn*
- Creation of R00.3 *Pulseless electrical activity, not elsewhere classified*
- Creation of M8246/0 *Neuroendocrine tumour, benign* (Australian code) for consistency with WHO ICD-10 Alphabetic Index addition: *Tumour/neuroendocrine/benign*
- Removal of the terms 'due to self neglect' from R63.6 *Insufficient intake of food and water*
- Separation of the concepts of amoebic 'brain', 'liver' and 'lung' abscesses in category A06 *Amoebiasis*; assign multiple codes from this category where amoebiasis is documented in multiple sites
- Replacement of the term 'Norwalk agent' with 'Norovirus' in A08.1 *Acute gastroenteropathy due to Norovirus*
- Addition of (s) to a number of code titles, and other minor code amendments
- Amendments to the Table of drugs and chemicals (for the classification of gases/fumes/carbon monoxide related substances)
- Amendment of the following category/code titles to include the concept of 'carbon monoxide':
 - X47 *Accidental poisoning by and exposure to carbon monoxide and other gases and vapours*
 - X67 *Intentional self-poisoning by and exposure to carbon monoxide and other gases and vapours*
 - X88 *Assault by poisoning and exposure to carbon monoxide and other gases and vapours*
 - Y17 *Poisoning by and exposure to carbon monoxide and other gases and vapours, undetermined intent*

Standardisation of terms 'category', 'subcategory' and 'digit'

EIGHTH EDITION

Background:

In the process of preparation of printing, inconsistencies were identified with the use of terminology at the instruction notes on code subdivisions in ICD-10-AM Tabular List. The terms category, subcategory, block, character and digit have been used interchangeably at fourth and fifth character subdivision notes. To be consistent with the terminology used in other sections of the Tabular List and ICD-10-AM database, it was decided that the term 'category' should be used for three character codes and the term 'subcategory' should be used for fourth character codes. The term 'digit' will be replaced with the term 'character'.

Chronic kidney disease

SIXTH EDITION

Background:

The US National Kidney Foundation developed a new definition and classification structure for Chronic Kidney Disease (CKD) via its Kidney Disease Outcomes Quality Initiative (K/DOQI), making it possible to identify the presence of chronic kidney disease earlier. NCCH adopted the US model to specify the stages of CKD for ICD-10-AM Sixth Edition.

The main amendments included:

- **N18** was changed to *Chronic kidney disease* and fourth character codes created (N18.1 – N18.5) to specify the five stages of the disease process.
- The term *renal* was replaced by the *kidney* throughout the classification and ACS, with the exception of conditions described in Latin. Amendments were made to *use additional code* notes, and *code also* notes were added to categories N00-N08 *Glomerular Diseases* and N10-N16 *Renal tubulo-interstitial diseases*.
- A number of codes were deleted and the inclusion terms listed under the deleted codes redistributed to appropriate codes. Other inclusion term entries were added to correspond with current indexing entries.

Methylamphetamine

SIXTH EDITION

Background:

NCCH received a public submission regarding *methylamphetamine*. In ICD-10-AM Fifth Edition, *Mental and behavioural disorders due to use of*

methylamphetamine is classified to F15. *Poisoning due to methylamphetamine* is classified to T43.6.

As a consequence of the public submission, fifth characters were created as follows:

- F15.0 – F15.9:
 - 0 *Unspecified stimulant*
 - 1 *Methylamphetamine*
 - 9 *Other specified stimulant*
- T43.6:
 - T43.60 *Unspecified psychostimulants with potential for use disorder*
 - T43.61 *Methylamphetamine*
 - T43.69 *Other psychostimulants with potential for use disorder*

Benzylpiperazine (BZP) was classified to T43.69. *Ecstasy (methylenedioxy methamphetamine)* was reclassified from T40.9 to T43.69. The following drugs, previously classified to T43.6 were reclassified to one of the new fifth character codes listed above:

- *Psychostimulant NEC* – reclassified to T43.60
- *Metamphetamine* – reclassified to T43.61
- *Methamphetamine* – reclassified to T43.61
- *Methylamphetamine* – reclassified to T43.61
- *Amfetaminil* – reclassified to T43.69

Chronic pain

TENTH EDITION

Background:

ACS 1807 Pain diagnoses and pain management procedures previously contained guidelines stating that chronic pain codes could only be assigned as principal diagnosis if the site of the pain was unspecified and met the criteria in ACS 0001 Principal diagnosis. Hence, identification of chronic pain patients in acute care settings may have been under reported, as the pain was classified to the aetiological condition or site, when documented, rather than the chronicity of the pain.

To address, this a decision was made to assign R52.2 Other chronic pain to classify all types of chronic pain (neuropathic, neoplastic, nociceptive etc) and ACS 1807 Pain diagnoses and pain management procedures revised to support the classification of chronic pain in its own right.

An Instructional note was created at R52.2 Chronic pain to allow the code to be assigned as either principal diagnosis or additional diagnosis (ie a flag code for chronicity of pain to be assigned in addition to the site/underlying cause).

Background:

A public submission was received by NCCH regarding injuries involving *pedestrian conveyances*. As a result, a category was created: V00 *Pedestrian injured in collision with pedestrian conveyance*. Fifth characters were created in this category to identify the mode of pedestrian conveyance used by the counterpart involved in a collision (fourth characters are consistent with codes V01-V09).

Codes were created at W02 (W02.6, W02.7, W02.8 and W02.9). These codes were inactivated in [Second Edition](#) in response to the creation of specific codes for place of occurrence and activity ICD-10-AM. They were reactivated in Fifth Edition with concept changes.

Minor amendments were also made to a number of other codes to support the new codes.

A standard was also created; ACS 2009 *Mode of pedestrian conveyance*.

- Expansion of complication codes to classify additional detail in the following areas:

- complications related to body systems
- complications related to mechanical complications
- complications related to devices, implants and grafts
- complications of organ transplants
- complications of anaesthesia
- complications related to accidental puncture and laceration
- Inactivation of the following codes:
 - I97.1 *Other functional disturbances following cardiac surgery*
 - J95.1 *Acute pulmonary insufficiency following thoracic surgery*
 - J95.2 *Acute pulmonary insufficiency following nonthoracic surgery*
 - J95.3 *Chronic pulmonary insufficiency following surgery*

Cachexia

TENTH EDITION

Background:

Following receipt of a public submission and a consensus document noted by the Cancer Institute of NSW, it was agreed that cachexia be considered a 'discrete clinical entity' rather than a symptom of malignancy and should therefore be classified as a condition in its own right.

Further to this concept, cachexia in other conditions may also be classified in its own right.

However, in certain conditions such as cachexia due to malnutrition, pituitary cachexia and diabetic neuropathic cachexia where cachexia is integral to the disease, cachexia will remain classified to the underlying condition.

In addition, the concept of 'adult failure to thrive' has been classified to R64 *Cachexia*.

A07.8 Other specified protozoal intestinal diseases

FIRST EDITION

Background:

Microsporidiosis is a protozoal infection that most commonly causes enteritis and less frequently extra-intestinal manifestations. The term was classified to A07.8 in First Edition following a recommendation from the Australian Collaborating Centre (AIHW/NCCH) at the WHO Meeting of the Heads of Collaborating Centres for the Classification of Diseases in Copenhagen, 1997. [0110](#) *Septicaemia*

THIRD EDITION

Background:

Code descriptors were changed from *septicaemia* to *sepsis* to clarify and standardise the meaning of these terms and their relationship to *infection*.

Clinical use of the terms *sepsis* and *septicaemia* varies and is often interchanged with *infection*. Extensive research showed that the term *sepsis* is the more correct, up-to-date term for serious localised or bacteraemic infection, which is accompanied by systemic manifestations. The term *septicaemia* is an imprecise and out-of-date term and its use in ICD-10-AM has been discouraged, as it adds to confusion and difficulties in data interpretation.

Where possible, the term *septicaemia* in ICD-10-AM Third Edition was changed to *sepsis*. The index was modified to ensure that *infection* refers to *localised conditions* and *sepsis* refers to *generalised* (or *systemic*) conditions. The emphasis in these changes is on the understanding of the interrelationships between *systemic inflammatory response syndrome* (SIRS), *sepsis* and *infection* and what clinicians mean when they use these terms.

These changes may have impacted on coding practice. Clinical coders should take care when interpreting documentation of *sepsis*, as the terminology and meaning may have changed. If *sepsis* is used to infer a *localised* infection, then the index main term *Infection* should be referred to, rather than *Sepsis*.

D37.7 Neoplasm of uncertain or unknown behaviour of other digestive organs

EIGHTH EDITION

Background:

The NCCC ICD team was requested to create a code for neoplasm of uncertain or unknown behaviour of pancreas by the NCCC DRG team as a response to a public submission which stated that it is unsatisfactory for a neoplasm of uncertain or unknown behaviour of the pancreas to be assigned to MDC 06 *Diseases and disorders of the digestive system* while benign and malignant tumours of the pancreas are correctly assigned to MDC 07 *Diseases and disorder of the hepatobiliary system and pancreas*.

Currently the ICD-10-AM Alphabetic Index classifies neoplasm of uncertain or unknown behaviour of pancreas to D37.7 *Neoplasm of uncertain or unknown behaviour of other digestive organs* together with neoplasms of uncertain or unknown behaviour of oesophagus, intestine and anal canal and is assigned to MDC 06 in AR-DRG versions 5.1, 5.2 and 6.0.

To ensure that neoplasm of uncertain and unknown behaviour of pancreas is assigned to MDC 07 *Diseases and disorder of the hepatobiliary system and pancreas*, the following changes were made:

- Changed D37.7 *Neoplasm of uncertain or unknown behaviour of other digestive organs* to a non valid code
- Created code D37.71 *Neoplasm of uncertain or unknown behaviour of pancreas*

0401 *Diabetes mellitus*

SECOND EDITION**Background:**

Diabetes mellitus was previously considered a single disease because the common diagnostic feature of diabetes is an elevated blood glucose concentration. More recent evidence suggests that diabetes mellitus is a heterogeneous group of metabolic abnormalities caused by many different mechanisms.

The codes within block E10–E14 *Diabetes mellitus* were extensively revised in the Second Edition. The index was also improved. The intention of the revision was to align the classification of *diabetes mellitus* in ICD-10-AM with the most contemporary knowledge in this most important national health area (see [Source of recommended change](#)).

Significant differences in ICD-10-AM Second Edition include:

- A change in terminology for E10 and E11 (Insulin-dependent to Type 1; Non-insulin dependent to Type 2);
- Inclusion of fifth character codes and the removal of the aetiology/manifestation convention for all codes from block E10–E14.
- Concepts were represented systematically throughout the categories in block E10–E14.
- E12 *Malnutrition-related diabetes mellitus* was deleted following clinical advice, as the concept was outdated and not seen in Australia.
- The concepts of *controlled* and *uncontrolled* were deleted.
- Introduction of codes for diabetes with features of insulin resistance.

ICD-10-AM Second Edition contains four categories for diabetes:

E10	<i>Type 1 diabetes mellitus</i>
E11	<i>Type 2 diabetes mellitus</i>
E13	<i>Other specified diabetes mellitus</i>
E14	<i>Unspecified diabetes mellitus</i>

Each category is split at the fourth character level into complication groups:

- .1 *with acidosis*
- .2 *with renal complication*
- .3 *with ophthalmic complication*
- .4 *with neurological complication*
- .5 *with circulatory complication*
- .6 *with other specified complication*
- .7 *with multiple complications*
- .8 *with unspecified complication*
- .9 *without complication*

The fifth characters further specify the type of complication.

For example:

E1-.3 ...with ophthalmic complication
E1-.33 ...with proliferative retinopathy

The codes in the diabetes mellitus section reflect a *with* relationship between diabetes and its recognised complications rather than, exclusively, a *cause and effect* relationship. Because diabetes mellitus is regarded as a complex of conditions rather than a single disease entity, the ICD-10-AM classification is designed to capture this complexity by classifying complications that occur commonly *with* diabetes mellitus. This *with* relationship does not exclude cause and effect but rather, relieves the clinical coder of the need to establish if the complication is caused *by* diabetes in order to assign a code.

To effect such major change in the classification and maintain WHO classification principles, it was necessary to introduce concept changes into ICD-10-AM. A concept change occurs when the meaning of a code or category in a previous edition changes in a later edition. Researchers and data analysts need to be aware when searching for data relating to the codes in block E10–E14, that the meaning of some of the codes has changed between First and Second Editions. For a complete list of the new codes, deleted codes and concept changes in each category please refer to the '[Supplementary Listing](#)'.

FOURTH EDITION

Background:

Multiple queries received by the NCCH identified minor changes and enhancements were needed to reflect updated terminology relating to diabetes mellitus.

Changes:

- E1-.23 – Change of code title from with end-stage renal disease to with advanced renal disease

Addition of the following inclusional terms:

- Acute renal impairment at E1-.29
- Diabetic fibrous breast disease (mastopathy) (sclerosing lymphocytic lobulitis) at E1-.69
- Diabetic muscle infarction (aseptic myonecrosis) (ischaemic myonecrosis) (tumorform focal muscular degeneration) at E1-.69
- Non-alcoholic fatty (change of) liver at E1-.72
- Personal history of gestational diabetes at Z87.5
- Artificial pancreas at Z96.4
- Addition of *Use additional code* note at categories E11, E13 and E14 to indicate *insulin treatment*
- Expansion of Z92.2 *Personal history of long-term (current) use of other medicaments* to include fifth character subdivisions for *aspirin* (Z92.21), *insulin* (Z92.22) and *other medicaments* (Z92.28). The use of Z92.22 is for patients whose non Type I diabetes is being controlled by insulin therapy. It is not assigned in situations of limited insulin therapy (eg post surgery) and will not be assigned at the first admission that ongoing insulin treatment is initiated.
- New category O24.5- Pre-existing impaired glucose regulation, in pregnancy
- New fifth character for *unspecified insulin treatment* for use with categories O24.1 – O24.9

SEVENTH EDITION ERRATA 5**Background:**

Significant changes were made to the diabetes mellitus (DM) coding standard (ACS 0401) for the Seventh Edition of ICD-10-AM – implemented across Australia from 1 July 2010. During the development of the Seventh Edition (by the National Centre for Classification in Health (NCCH), University of Sydney), it was recommended that a workshop of interested parties be convened to facilitate comprehensive commentary and advice for the NCCH in regard to diabetes mellitus classification. This suggestion emanated from concerns expressed by the Australian Institute of Health and Welfare (AIHW) around the quality of the DM morbidity data. Unfortunately, the changes to the Seventh

Edition DM coding standards were implemented before such a workshop was convened.

The NCCC consulted widely with expert DM clinicians and conducted a workshop of interested parties on 4 March 2011, which focused on the clinical appropriateness of Seventh Edition ACS 0401 and the impact on statistical data given the significant changes made to the standard.

The main recommendation made during the workshop was that 'when documented, diabetes mellitus should always be coded.'

However, while trying to action this recommendation the NCCC and ITG agreed that a thorough review of ACS 0401 *Diabetes mellitus and impaired glucose regulation* and the remaining sixteen recommendations from the diabetes workshop was necessary given:

- the classification (ACS) changes to affect this recommendation would impact on all the other rules and narrative in ACS 0401
- the negative impact that multiple rounds of classification changes would have on the longitudinal data – there could potentially be changes implemented in July 2012 (to affect the rule 'when documented, diabetes mellitus should always be coded') and then further changes in July 2013 to affect the remaining recommendations
- there was anecdotal evidence that there is some inconsistency in the application of Seventh Edition diabetes coding rules due to coder interpretation/application of the revised Seventh Edition ACS 0401 and some concern about "under coding" DM when documented.

The NCCC and ITG undertook a thorough review of ACS 0401 and the following general recommendations were made:

- A revised version of ACS 0401 would be released for implementation for use with Seventh Edition ICD-10-AM on 1 July 2012. The ITG recommended that this be made available in two versions:
 - one which focuses on the classification rules – this replaced the current ACS 0401.
 - one which contains all the relevant updated clinical detail and the classification rules – this is essentially an update, review and reformat of the content of Seventh Edition ACS 0401. This is referred to as 'ACS 0401 – *Extended clinical version*'
- the revisions are limited, as far as possible, to the standard with changes to the Tabular List and Alphabetic Index only made where necessary to support the ACS 0401 revisions.
- the changes recommended by ITG are for both Seventh Edition (from 1 July 2012) and Eighth edition so as to limit the burden on coders and maintain consistency in DM coding for the remaining life of ICD-10-AM.

The following amendments were made for DM coding in ICD-10-AM Tabular List and Alphabetic Index and released and published as Seventh Edition Errata (June 2012, Seventh Edition) for implementation 1 July 2012:

- ICD-10-AM Tabular List:
 - revised inclusion terms at E09.72, E11.72, E13.72 and E14.72:
 - deleted inclusion term 'hypertension'
 - revised inclusion term 'dyslipidaemia'

from: dyslipidaemia (elevated fasting triglycerides and depressed HDL-cholesterol)

to: dyslipidaemia characterised by elevated fasting triglycerides or depressed HDL-cholesterol

- added inclusion terms: 'nonalcoholic steatohepatitis (NASH)' and 'overweight'
- revised inclusion term 'nonalcoholic fatty (change of) liver', added term and abbreviation 'disease (NAFLD)'
- revised inclusion term 'obesity': deleted (meeting WHO or other recognised criteria), added NEM (morbid)
- added the following note to E09.72, E11.72, E13.72 and E14.72
Note: Hypertension is a common disorder with a variety of causes and its attribution to insulin resistance is only accepted if accompanied with at least one of the features listed above.
- revised inclusion terms at E1-.71 to include all codes from E1-.3-
- removed the excludes notes at:
 - E1-.51 **Diabetes mellitus with peripheral angiopathy, without gangrene*
 - E1-.52 **Diabetes mellitus with peripheral angiopathy, with gangrene*
- removed ACS 0401 symbol reference from:
 - P70.0 *Syndrome of infant of mother with gestational diabetes*
 - P70.1 *Syndrome of infant of a diabetic mother*
 - Z87.5 *Personal history of complications of pregnancy, childbirth and the puerperium*
 - Z92.22 *Insulin*
- ICD-10-AM Alphabetic Index:
 - deleted NEM 'with gangrene' from *Diabetes/with/angiopathy, peripheral/with/foot ulcer*
 - deleted code 'E1-.73' and added 'see ACS 0401 Diabetes mellitus and intermediate hyperglycaemia, 6 Diabetic foot' at the following index pathways:
 - *Diabetes/with/angiopathy, peripheral/with/foot ulcer*
 - *Diabetes/with/angiopathy, peripheral/with/gangrene/and foot ulcer*
 - *Diabetes/with/gangrene/with peripheral angiopathy/and foot ulcer*
 - *Diabetes/with/neuropathy/with foot ulcer*
 - added sub-term and see reference 'with foot ulcer — see ACS 0401 Diabetes mellitus and intermediate hyperglycaemia, 6 Diabetic foot' at the following index pathways:
 - *Diabetes/with/Charcot's arthropathy*
 - *Diabetes/with/arthropathy*
 - replaced 'and' with 'with' at *Diabetes/with/gangrene/and with peripheral angiopathy*
 - added the following at pathway 'Diabetes/with':
 - 'arterial disease, peripheral — see Diabetes/with/angiopathy, peripheral'
 - made the following revisions at 'Diabetes/with/arthropathy':

EIGHTH EDITION

Background:

ACS 0401 *Intermediate hyperglycaemia and diabetes mellitus* was reviewed and re-released by the NCCC for implementation 1 July 2012. That review highlighted minor revisions that needed to be made for intermediate hyperglycaemia (IH) and diabetes mellitus (DM) in Eighth Edition. These were mostly changes to the ICD-10-AM Tabular List and Alphabetic Index. There were also a number of public submissions and queries submitted to NCCC which have highlighted areas requiring revision to the diabetes mellitus classification for Eighth Edition.

1. Update terminology of *impaired glucose regulation (IGR)* to *intermediate hyperglycaemia*

Background:

A joint WHO and International Diabetes Federation Technical Advisory Group was commissioned to review the WHO 1998 diagnosis and classification of diabetes mellitus. The report from this group does not use the term *impaired glucose regulation* (IGR) but rather *intermediate hyperglycaemia* (2006).

http://www.who.int/diabetes/publications/Definition%20and%20diagnosis%20of%20diabetes_new.pdf

The terminology was updated from 'IGR' to 'intermediate hyperglycaemia (IH)' in the 1 July 2012 release of ACS 0401. However, the change in terminology in the Tabular List and Alphabetic Index was not updated until Eighth Edition.

Changes:

Updated terminology of 'impaired glucose regulation' to 'intermediate hyperglycaemia' throughout the ICD-10-AM/ACS:

- Tabular List:
 - revised terminology in the code titles in the Tabular List for E09.-
 - revised terminology in other references in the Tabular List eg excludes notes
- Alphabetic Index:
 - at *Impaired/glucose regulation*: deleted all sub-terms and added 'see Hyperglycaemia/intermediate'
 - created new sub term 'intermediate' under lead term 'Hyperglycaemia'
 - added all new pathways for codes in category E09.- under *Hyperglycaemia, intermediate*; essentially moved all entries which were previously under *Impaired/glucose regulation* to *Hyperglycaemia/intermediate*
- revised terminology in outstanding cross references to ACS 0401 in ACS:
 - ACS 0002 *Additional diagnoses*
 - ACS 1602 *Neonatal complications of maternal diabetes*
 - ACS 1438 *Chronic kidney disease*

2. Review Tabular List Note: *Diagnostic criteria* at E09-E14 and O24.2

Background:

The diagnostic criteria for diabetes mellitus and IGR/IH have been revised by WHO and the IDF (2006) and they have been reviewed by the CTG clinicians.

http://www.who.int/diabetes/publications/Definition%20and%20diagnosis%20of%20diabetes_new.pdf

The NCCC sought ITG advice about the usefulness of these criteria for coders in the classification and suggested the criteria be deleted rather than updated in Eighth Edition. After discussion during the ITG diabetes teleconference on 16 October 2011, it was recommended that the criteria be deleted from the Tabular List.

Changes:

Deleted diagnostic criteria in Tabular List at block E09-E14 and code O24.4 *Diabetes mellitus arising during pregnancy*.

3. Add index entries for *latent diabetes mellitus in adults (LADA)*

Background:

Following ITG feedback that LADA was infrequently documented, the NCCC agreed that the references to LADA/Type 1.5 diabetes mellitus be deleted in ACS 0401 (1 July 2012 revision) and that the condition be indexed appropriately in Eighth Edition.

The NCCC added index entries for LADA/Type 1.5 diabetes mellitus to guide coders to the correct code as was previously instructed in ACS 0401 (Seventh Edition).

Changes:

Alphabetic Index revised:

- at index pathway Diabetes/with added term 'autoimmune, in adults (LADA) (Type 1.5) E14.-' and sub-term 'with positive auto-antibodies (GAD) (IA2) E10.-'
- at index lead-term Diabetes added term 'Type 1.5 E14.-' and sub-term 'with positive auto-antibodies (GAD) (IA2) E10.-'

4. Additional clinical updates

Background:

Clinical review of the classification has highlighted some terms that should be added to the index at lead terms *Diabetes* and *Hyperglycaemia, intermediate*.

Changes:

The following revisions have been made in the Tabular List for Eighth Edition:

- added inclusion term:
 - 'diabetes mellitus with left ventricular diastolic dysfunction' to E1-.53

The following revisions have been made in the Alphabetic Index for Eighth Edition:

- revised classification of DM with Ebstein's changes from E1-.29 to E1-.22. Also revised terminology to Ebstein(-Armani)
- added the following to *Diabetes/with*:
 - 'arterial disease, peripheral – see *Diabetes/with/angiopathy, peripheral*
 - 'claudication, intermittent – see *Diabetes/with/angiopathy, peripheral*
 - 'high albuminuria E1-.21'
 - 'iridocyclitis E1-.39'
 - 'left ventricular diastolic dysfunction E1-.53'
 - 'metabolic syndrome E1-.72'
- added the following 'diabetic terms' to *Diabetes, diabetic* (see also point 5 below)
 - 'Charcot's arthropathy E1-.61'
 - 'frozen shoulder E1-.61'
 - 'neuropathy, neuropathic', with sub-terms
 - 'cachexia E1-.42'
 - 'early onset E1-.42'
 - 'ischaemic optic E1-.39'
 - 'neuropathitis, peripheral E1-.49'
 - 'periarthritides, shoulder E1-.61'
 - 'periungual telangiectasia E1-.62'
 - 'rotator cuff syndrome E1-.61'
- added the following to *Hyperglycaemia/intermediate/with*
 - 'high albuminuria E09.21'
 - 'metabolic syndrome E09.72'
 - 'overweight E09.72'
- added NEMs (*acute*) (*chronic*) to *Diabetes/with/periodontitis*
- added default code 'E1-.42' to *Diabetes/with/neuropathy, peripheral*
- added default code 'E09.42' to *Hyperglycaemia/intermediate/with/neuropathy, peripheral*

5. Cross references for terms indexed as "diabetic"

Background:

At the ITG Diabetes Workshop (19 October 2011) the distinction between terms described/documented as 'diabetic' and 'diabetes with' and the classification of

such terms was discussed. It was agreed that the NCCC should check the Alphabetic Index to ensure that diabetic terms were indexed not only under *Diabetes, diabetic* but also under the lead terms for the other conditions which were 'caused by' diabetes mellitus.

Terms indexed under both *Diabetes, diabetic* and *Diabetes/with* were also reviewed.

Changes:

The Alphabetic Index references for the following conditions have been revised so that there is either an additional sub term for *diabetic* or a cross reference 'see *Diabetes/with, . . .*'.

- *Acetonaemia*
- *Dermopathy*
- *Diarrhoea*
- *Erythema*
- *Frozen shoulder*
- *Hyperosmolality*
- *Neuropathy: cachexia; early onset; ischaemic optic*
- *Periarthritis, shoulder*
- *Rotator cuff syndrome*
- *Scleroderma*
- *Shin spots*

Additional index entries were added for the following terms at *Diabetes, diabetic*:

- '*neuropathy/ischaemic optic* E1-.39'
- '*neurophthisis, peripheral* E1-.49'
- '*periungual telangiectasia* E1-.62'
- '*periarthritis, shoulder* E1-.61'
- '*rotator cuff syndrome* E1-.61'

Index entry and sub-terms for *Diabetes, diabetic/gangrene* were deleted as these terms are sufficiently indexed at *Diabetes/with*.

6. Correction of inconsistencies between and within the Tabular and Index

a. Diabetes mellitus with fixed or persistent proteinuria (refer also to Q2756)

Background:

A query received by NCCC (Q2756) highlighted that the Tabular List and Alphabetic Index were inconsistent in the way terms 'fixed' and 'persistent' were depicted in the inclusion term 'proteinuria' for codes E09.21 and E1-.22; in the Index the terms were essential modifiers whereas in the Tabular they were NEMs. Clinical advice confirmed that the terms 'fixed' and 'persistent' should be essential modifiers for the allocation of E09.21 and E1-.22.

The NCCC also sought clinical advice regarding the classification of 'fixed' proteinuria, given that 'fixed' is not specified in the Index under the lead term *Proteinuria*. Clinicians' advice indicated that while the term 'fixed proteinuria' was not in common use, it should be classified to N39.1 *Persistent proteinuria, unspecified*.

Changes:

The following changes were made to the Tabular List:

- terms 'fixed' and 'persistent' added as essential modifiers at the inclusion term 'proteinuria' for codes E09.21 and E1-.22.

The following changes were made to the Alphabetic Index:

- terms 'fixed' and 'persistent' added as essential modifiers at *Hyperglycaemia/intermediate/with/proteinuria*.
- added 'fixed N39.1' to *Proteinuria*.

b. Diabetes mellitus with orthostatic hypotension (refer also to TN392)

Background:

A task (TN392) was created in response to a query which stated "The Index contains entries for *Hypotension, postural* and *Hypotension, orthostatic* and both terms are assigned to I95.1 *Orthostatic hypotension*. Index entries also exist for DM with postural hypotension, however there is no reference to DM with 'orthostatic' hypotension."

Clinical advice confirmed that 'orthostatic hypotension' was synonymous to 'postural hypotension' and that DM with orthostatic hypotension should be indexed to E1-.43 **Diabetes mellitus with diabetic autonomic neuropathy*.

Changes:

The following changes were made to the Tabular List:

- revised the inclusion terms at E1-.43 to include the term 'orthostatic hypotension'

The following changes were made to the Alphabetic Index:

added term 'orthostatic' to *Diabetes/with/hypotension*

c. IH and DM with retinal haemorrhages (E1-.31 and E1-.32)

Background:

The Tabular inclusion term NEMs at E09.31 and E1-.31, and E09.32 and E1-.32 were inconsistent with the essential modifiers in the Index at *Diabetes/with/retinal/haemorrhages*.

Changes:

The Tabular inclusion terms at E1-.31 and E1-.32 have been revised so that 'dot-and-blot' and 'flame-shaped' are essential modifiers at E09.31 and E1-.31 and 'blotchy', 'round' and 'small' are essential modifiers at E09.32 and E1-.32.

7. Other ACS references to conditions that should always be coded ACS 0102 HIV/AIDS and ACS 0104 Viral hepatitis

Background:

While drafting Rule 1 in ACS 0401 (see TN108), ITG referred to other standards which instructed coders to always code certain conditions, namely ACS 0102 *HIV/AIDS* and ACS 0104 *Viral hepatitis*.

ITG agreed that the wording in ACS 0102, ACS 0104 and ACS 0401 should be consistent and therefore the wording in ACS 0102 and ACS 0104 should be changed to be consistent with that in the draft ACS 0401 (see TN108, *Rule 1*).

Changes:

The following Australian Coding Standards changes have been made:

- ACS 0102 *HIV/AIDS*, the following sentence has been revised from: 'Documentation of HIV status should always be coded even if the criteria for additional diagnosis is not met'.
to: 'HIV status should always be coded when documented'.
- ACS 0104 *Viral hepatitis*, the following sentence has been revised

from: 'Viral hepatitis or hepatitis carrier status should always be coded even if the criteria for additional diagnosis are not met'.

to: 'Viral hepatitis should always be coded when documented'.

E16.4 Abnormal secretion of gastrin

FIRST EDITION

Background:

A new code for abnormal secretion of gastrin was incorporated into First Edition following a recommendation from the Australian Collaborating Centre (AIHW/NCCH) at the WHO Meeting of the Heads of Collaborating Centres for the Classification of Diseases in Copenhagen, 1997.

The terms *Hypergastrinaemia* and *Zollinger-Ellison syndrome* were reclassified from E16.8 *Other specified disorders of pancreatic internal secretion* to E16.4 in line with the introduction of this new code.

The advice to include this code and reclassify these terms in the First Edition was issued with the First Errata (April 1998) to the First Edition. The code became effective from July 1998.

E16.8 Other specified disorders of pancreatic internal secretion

FIRST EDITION

Background:

The Australian proposal to WHO to introduce a new code for *abnormal secretion of gastrin* (E16.4) was originally approved by WHO for category E16.8. Hence, the introduction of two new Australian codes, E16.81 *Increased secretion of gastrin* and E16.88 *Other specified disorders of pancreatic internal secretion*. E16.8 became a subcategory.

The WHO decision was changed shortly before publication of the First Edition, which resulted in the changes to this category. The two Australian codes were deleted, E16.4 *Abnormal secretion of gastrin* was introduced and E16.8 *Other specified disorders of pancreatic internal secretion* reverted to a valid code.

The terms *Hypergastrinaemia* and *Zollinger-Ellison syndrome* were reclassified from E16.8 to E16.4 *Abnormal secretion of gastrin* in line with the introduction of E16.4.

The advice to implement these changes into First Edition was issued with the First Errata (April 1998) to the First Edition and became effective from July 1998.

E84 Cystic fibrosis

NINTH EDITION

Background:

This task emanated from a number of coding queries related to the classification and sequencing of cystic fibrosis (CF) and its manifestations which highlighted limitations of the current structure of the CF codes in ICD-10 and hence ICD-10-AM.

Consequently, codes in category E84 were aggregated to a single three character code eliminating confusion over assigning a particular E84.- depending on the manifestation or differing combinations of manifestations. This brings the coding of cystic fibrosis into line with other chronic conditions, with sequencing being determined by ACS 0001 *Principal diagnosis/Problems and underlying conditions* and the assignment of manifestation codes in accordance with ACS 0002 *Additional diagnoses*.

The main changes that have been made to ICD-10-AM Eighth Edition include:

- ICD-10-AM Tabular List:
 - Delete the inclusion term at E84.8 'cystic fibrosis with combined manifestations'
- ICD-10-AM Alphabetic Index:
 - Delete the index entry 'combined manifestations' under the lead term 'Fibrosis, fibrotic'

0627 Mitochondrial disorders

SECOND EDITION

Background:

Mitochondrial diseases are the subject of a great deal of medical research. However, our understanding of the complexities of mitochondrial diseases is still incomplete. Mitochondrial DNA deletions and point mutations are increasingly being identified as the cause of other conditions. These include a large number of multisystemic disorders of extremely variable expression as well as *diabetic embryopathy*, *non-insulin dependent diabetes mellitus*, *cardiomyopathies*, *ischaemic colitis*, *refractory anaemia* and other *myelodysplasias* and *neonatal liver failure*.

In ICD-10-AM First Edition G31.81 *Mitochondrial cytopathy* was created based on the ICD-9-CM code 330.4 *Mitochondrial cytopathy*. This was seen as the best approach at the time. Further research conducted by the NCCH, in consultation with WHO and the CCCG, led the NCCH to conclude that a default code in the nervous system chapter may not be appropriate. Research found that there are mitochondrial disorders classified to other chapters in ICD-10. For example:

- Carnitine deficiencies and disorders (E71.3)
- Lactic acidosis (E87.2)
- Progressive external ophthalmoplegia (H49.4)
- Pyruvate carboxylase deficiency (E74.4)

The WHO Update Reference Committee recommended that a working group investigate and report on the classification of mitochondrial disorders. In the interim, the NCCH made several changes to the Second Edition. Codes G31.81 and G31.88 were deleted. Mitochondrial diseases that are predominantly degenerative diseases of the nervous system remain classified to G31.8. The default code for mitochondrial disorders was changed to E88.8 *Other specified metabolic disorders*. The following terms were reclassified:

- Mitochondrial encephalopathy acidosis stroke-like episode syndrome (MELAS) – from G31.81 to G71.3
- Myoclonus epilepsy ragged red fibre syndrome (MERFF) – from G31.81 to G40.4
- Mitochondrial (cytopathy) (defect) (disease) (disorder) (syndrome) NOS – from G31.88 to E88.8

Background:

Cerebral palsy is a non-progressive disorder of movement and posture that presents in childhood following a cerebral insult. The most common form of cerebral palsy is *spastic cerebral palsy*. The most common form of spastic cerebral palsy is *spastic diplegia*.

The changes made to this rubric in Second Edition align the classification with current terminology (ie *infantile* is no longer appropriate) and resolve the confusion between the descriptions of G80.0, G80.1 and G80.2 (the previous descriptions were not mutually exclusive).

The Australian proposal to WHO to update the classification of cerebral palsy in ICD-10 was approved at the WHO Meeting of the Heads of Collaborating Centres for the Family of International Classifications in Brisbane, 2002.

FIRST EDITION

Background:

The following fifth character subdivision was incorporated into First Edition for use with category G82 to indicate the *functional level of spinal cord injury* in subsequent (chronic) phases of paraplegia/tetraplegia. This decision was made on the recommendation of the CCCG.

Category G82 is for use in cases only where the paraplegia/tetraplegia is of a longstanding nature and the patient is not undergoing treatment in the initial phase of care.

SECOND EDITION

Background:

The note to category G82

All notes relating to the ICD's primary coding guideline were deleted in Second Edition to avoid confusion for the Australian user. Primary coding refers to situations where the codes are used in single condition morbidity analysis (only one diagnosis code is used to classify an entire episode of care). In Australia, the multiple coding rule is applied and all conditions relevant to an episode of care are coded.

Changes to the fifth character codes:

In ICD-10-AM First Edition, category G82 *Paraplegia and tetraplegia* was assigned for all cases where the paraplegia/tetraplegia is of a longstanding nature. Non-traumatic acute cases were classified with a code for the condition causing the acute paraplegia/tetraplegia and two additional codes reflecting the type and site of cord lesion and the functional level of cord lesion. Because the later codes are injury codes, an external cause code was also required. External cause codes are not relevant in non-traumatic cases and a request to simplify the coding of non-traumatic cases was considered by the NCCH.

The fifth character codes for G82 were revised to reflect the coding approach used in ICD-9-CM. The fifth characters retain the information about the *complete/incomplete* nature of the spinal cord lesion. The information that is lost is the *functional level of spinal cord injury: cervical, thoracic or lumbar*. However, the code descriptors in category G82 already indicate whether the patient had paraplegia or tetraplegia. Therefore, the previous descriptors for the fifth character codes are to some extent redundant. For example, paraplegia patients will not have cervical fifth characters (1 or 2) and tetraplegia patients will not have thoracic or lumbar fifth characters (3,4,5, or 6).

The changes to category G82 represent a concept change. A concept change occurs when the meaning of a code or category in a previous edition changes in a later edition. For the changes to category G82 in ICD-10-AM Second Edition, it was necessary to delete First Edition codes and reintroduce them in the Second Edition as a different concept.

Researchers and data analysts need to be aware, when searching for data relating to these codes, that the meaning of the codes has changed between First and Second Editions.

I26.8 Iatrogenic pulmonary embolism**FIRST EDITION****Background:**

Iatrogenic pulmonary embolism is an important clinical indicator and should be captured via a unique code. A new code for this condition was incorporated into First Edition following a recommendation from the Australian Collaborating Centre (AIHW/NCCH) at the WHO Meeting of the Heads of Collaborating Centres for the Classification of Diseases in Copenhagen, 1997.

Source of recommended change:

Cardiovascular CCCG

SECOND EDITION**Background:**

Major work was undertaken for Second Edition to improve the classification of *procedural complications*. Changes were made to the code titles and index entries (from *postoperative* to *postprocedural*) to reflect clinical terminology. As part of this work, I26.8 *Iatrogenic pulmonary embolism* was deleted, as the code overlapped with existing codes in the ICD-10-AM.

Data analysts should note that the coding of *postoperative pulmonary embolism* in ICD-10-AM (I97.8) differs to that in ICD-10 (T81.7).

I26.9 Pulmonary embolism without mention of acute cor pulmonale**SECOND EDITION****Background:**

The term *postoperative pulmonary embolism* was reclassified to I97.8 *Other postprocedural disorders of the circulatory system, not elsewhere classified*.

The advice to reclassify this term was issued with Second Errata (September 2000) to the Second Edition. The change became effective from September 2000.

Data analysts should note that the coding of *postoperative pulmonary embolism* in ICD-10-AM (I97.8) differs to that in ICD-10 (T81.7).

I27.2 Other secondary pulmonary hypertension

THIRD EDITION

Background:

Pulmonary hypertension may occur without an identifiable underlying cause (*primary pulmonary hypertension*). It may also occur secondary to other disease processes that originate outside the lung (*secondary pulmonary hypertension*), such as *scleroderma*, *SLE*, *congenital valve diseases*, *ischaemic heart disease* and *cardiomyopathy*. A diagnosis of *primary pulmonary hypertension* is generally made when all types of *secondary pulmonary hypertension* have been excluded on clinical grounds.

Primary pulmonary hypertension is a rare syndrome and is classified to I27.0 *Primary pulmonary hypertension*. *Secondary pulmonary hypertension*, a more common occurrence, was not originally classified in ICD-10. A recommendation to add subcategory I27.2 *Other secondary pulmonary hypertension* was made by the Australian Collaborating Centre (AIHW/NCCH) at the WHO Meeting of the Heads of Collaborating Centres for the Classification of Diseases in Washington DC, 2001.

SECOND EDITION

Background:

Bronchiolitis obliterans organising pneumonia [BOOP] is an interstitial lung disease which may follow pulmonary disorders including adult respiratory distress syndrome, upper respiratory tract infection, organising infections such as *Mycoplasma pneumoniae* and viral infections, inhalation of toxic agents and extrinsic allergic alveolitis.

On the recommendation of the CCCG, this term was classified to J84.8 in Second Edition.

Pneumothorax is a common complication of fine needle biopsy and may occur with insertion of an intercostal cannula. The distinction between a *pneumothorax* as an *adverse effect of medical treatment* versus a *spontaneous or traumatic pneumothorax* is an important one. A new code for *iatrogenic pneumothorax* has been incorporated into First Edition following a recommendation from the Australian Collaborating Centre (AIHW/NCCH) at the WHO Meeting of the Heads of Collaborating Centres for the Classification of Diseases in Copenhagen, 1997.

EIGHTH EDITION

Background:

The NCCC received a public submission concerning the classification and AR-DRG assignment for sunburn. Given that sunburn is a significant health issue and has long term consequence on the skin cancer, the ITG (ICD Technical Group) decided at its meeting on 6 May 2011 that, sunburn requires multiple ICD codes to identify the sunburn site and external causes of injury.

The following changes have been made to ICD-10-AM Tabular List:

- added 'use additional code' instructions to the Tabular List at L55 *Sunburn*:
Use additional code (T20–T25, T29–T30) to identify site of sunburn
Use additional external cause code (Chapter 20) to identify cause
Use additional code (T31) to identify the percentage of body surface area with full thickness burn, if applicable
- removed sunburn (L55.-) from the exclusion list at T20-T31 *Burns*
- modified ACS 1911 *Burns* to clarify the change
- removed L55.- from the list of codes not requiring an external cause in ACS 2001 *External cause code use and sequencing*.

Background:

A public submission (P159) was received highlighting that the current classification for pressure injury is outdated. Following extensive consultation with expert pressure injury clinicians and societies, the classification of pressure injury including the ACS was reviewed for currency and clinical appropriateness. The major changes included:

- Added the new term 'pressure injury' to replace existing terms 'decubitus ulcer' and 'pressure area' and listed 'decubitus ulcer' 'pressure area' and 'pressure ulcer' as synonymous inclusion terms
- Refined definitions of pressure injuries to be consistent with the joint NPUAP-EPUAP- PPPIA (the National Pressure Ulcer Advisory Panel, the European Pressure Ulcer Advisory Panel and the Pan Pacific Pressure Injury Alliance) pressure ulcer definitions
- Addition of an instructional note at L89.- *Pressure injury* to indicate that pressure injury definitions provided are for use by clinicians, coders should not assign a severity code based on the clinical description only
- Created new codes for '*Suspected deep tissue injury, depth unknown, so stated*' and '*Pressure injury, unstageable, so stated*'
- Expanded the pressure injury codes to the fifth character to specify the site of pressure injury
- Amended the Alphabetic Index to support above changes
- Amended the title of ACS 1221 to specify 'Pressure injury' and update clinical and classification advice for pressure injury.

FIFTH EDITION

Background:

NCCH received a number of queries regarding the classification of *bladder neck obstruction* (BNO) and *bladder outflow obstruction* (BOO). BOO is classified to N13.8. The cause of the obstruction may be any one of a number of factors (eg *prostatic enlargement*, *urethral stricture* etc). If the cause of the BOO is known, a code should be assigned for that condition, with an additional code to indicate the obstruction (N13.8). *Bladder outflow obstruction* was added as an inclusion term at N13.8.

BNO is classified to N32.0 *Bladder neck obstruction*. This condition is not classified to a uropathy code in ICD-10-AM, as it may be a localised condition and not cause problems in the urinary tract (ureters and kidneys).

A new code for *loin pain/haematuria syndrome* was incorporated into First Edition following a recommendation from the Australian Collaborating Centre (AIHW/NCCH) at the WHO Meeting of the Heads of Collaborating Centres for the Classification of Diseases in Copenhagen, 1997.

TENTH EDITION**Background:**

Following receipt of public submissions and publication of Coding Rules, amendments were made to ICD-10-AM Chapter 15 *Pregnancy, childbirth and the puerperium*:

- **O10** was renamed to *Pre-existing hypertension in pregnancy, childbirth and the puerperium*, and the four character codes (O10.0-O10.9) were inactivated. An *Instructional* note was added to promote assignment of a code from I10-I15, with O10.
- **O26.82** *Carpal tunnel syndrome in pregnancy* and **O26.83** *Neuralgia in pregnancy* were inactivated and the concepts reclassified to **O99.3** *Mental disorders and diseases of the nervous system in pregnancy, childbirth and the puerperium*, to centralise the classification of nervous system complications in pregnancy. Assign codes from Chapter 6 *Diseases of the nervous system* for specific nervous system conditions (eg carpal tunnel syndrome, peripheral neuritis) with O99.3 to provide specificity.
- Categories **O29** *Complications of anaesthesia during pregnancy*, **O74** *Complications of anaesthesia during labour and delivery* and **O89** *Complications of anaesthesia during the puerperium*, and **O75.4** *Other complications of obstetric surgery and procedures* were deleted, as they classified complications of procedures not complications of pregnancy, childbirth and the puerperium. Assign codes for these concepts as per the updated guidelines in ACS 1904 *Procedural complications* (see also [Procedural complications](#)).
- **O32.5** *Maternal care for multiple gestation with malpresentation of one fetus or more* was deleted; assign one or more codes from **O32** *Maternal care for known or suspected malpresentation of fetus*, as appropriate. Multiple gestation is identified by the assignment of **O30** *Multiple gestation*.
- A number of *Excludes* notes were deleted (for consistency with the changes to the conventions – see also [Type 1 and type 2 exclusions](#)) and *Code also Instructional* notes were added to encourage clinical coders to assign a code from another chapter to provide specificity to a (nonspecific) Chapter 15 code.
- A code for diabetes mellitus (**E09-E14**) is always assigned with **O24.0-O24.3** and **O24.5** as per the *Code also Instructional* notes at **O24** *Diabetes mellitus in pregnancy*.
- *Excludes* notes were added to the beginning of Chapter 15 to clarify that codes from that chapter are not assigned for **Z33** *Pregnant state, incidental*, **Z34** *Supervision of normal pregnancy* or **S00-T98** *Injury, poisoning and certain other consequences of external cause*.
- A number of code titles were amended to replace the terms 'complicating pregnancy' with 'in pregnancy'.
- Amendments were made to clarify and differentiate the *Delivery* codes (**O80-O84**), for consistency with the creation of ACS 1505 *Delivery and assisted delivery codes*.

ELEVENTH EDITION**Background:**

A number of amendments were made to the classification of obstetric conditions, including:

- Amendments to O03-O08 (abortion) (glossary descriptions, inclusion terms, includes notes, excludes notes, instructional notes)
- Addition of glossary descriptions/definitions to O31.1 *Continuing pregnancy after abortion of one fetus or more* and O31.2 *Continuing pregnancy after intrauterine death of one fetus or more* to clarify when these codes are applicable
- Amendment to the title of block O47 *False labour or labour without delivery* and creation of O47.2 *Labour without delivery*
- Creation of O61.2 *Failed medical with surgical induction of labour* to classify failed induction of labour, following use of both medical and surgical (instrumental) methods
- Creation of O63.3 *Prolonged third stage (of labour)*
- Addition of a *Note* to clarify that the codes in category O70 *Perineal laceration during delivery* represent a continuum. Where multiple perineal lacerations (ruptures or tears) of different degrees are documented, assign a code for the highest (most severe) degree only
- In order to apply the ICD-10-AM principles of multiple condition coding, the concepts of atonic uterus, retained placenta and membranes, and postpartum haemorrhage (PPH) were separated. This will allow assignment of both a code from category O72 *Postpartum haemorrhage*, and the underlying cause, where supported by documentation in the clinical record. The *Code also note* at O72 was amended to clarify the reclassification of PPH and its underlying causes. Additionally, O72.0 *Third-stage haemorrhage*, O72.1 *Other immediate postpartum haemorrhage* and O72.2 *Delayed and secondary postpartum haemorrhage* are differentiated by onset of haemorrhage. Glossary descriptions/definitions were added to identify these differences, for consistency with definitions in ICD-11
- The classification of placenta adherens (adherent placenta NOS) was separated from O43.2 *Morbidly adherent placenta* and classified to O73.0 *Retained placenta*. O73.1 was also renamed: *Retained portions of placenta and membranes*
- The concepts in category O99.3 were separated to differentiate:
 - O99.31 *Mental disorders in pregnancy, childbirth and the puerperium*
 - O99.32 *Diseases of the nervous system in pregnancy, childbirth and the puerperium*
- Minor/other amendments were made to support the changes to obstetric coding, including:
 - *Excludes notes* were deleted throughout ICD-10-AM for conditions 'complicating abortion or ectopic or molar pregnancy' to promote multiple condition coding (that is, assignment of a code from another chapter to provide specificity in addition to a code from O00-O08 *Pregnancy with abortive outcome*). The ICD-10 based *Excludes notes* were designed for single condition coding.
 - Amendments were made to category P07 *Disorders related to short gestation and low birth weight, not elsewhere classified* to incorporate the guidelines previously included in ACS 1618 *Low birth weight and gestational age*, which was deleted for Eleventh Edition
 - The title of category Z32 *Pregnancy supervision, examination and test, not elsewhere classified* was amended to classify the new code Z32.2 *Initiation of medical abortion*, which is assigned in limited circumstances (ie for 'staged' abortion), as outlined in ACS 1511 *Termination of pregnancy (abortion)*.

O09 Duration of pregnancy

These changes have not yet been adopted by WHO.

The codes for duration of pregnancy have been developed by the CCCG specifically to identify the *duration of pregnancy* for a specific group of high-risk pregnancies:

Abortion (O00-O08 Pregnancy with abortive outcome),

Threatened abortion (O20.0),

Premature rupture of membranes (O42) before 37 completed weeks of gestation,

O09.5 Duration of pregnancy 34-< 37 completed weeks

EIGHTH EDITION

Background:

The code title of O09.5 *Duration of pregnancy 34 – 36 completed weeks* is misleading in that 36 completed weeks applies to 35 weeks + 7 days and does not cover 36 weeks + 1-6 (one to six) days, that is less than 37 completed weeks and deemed premature. This results in a gap of 1 - 6 days. In order to capture premature labour or deliveries with the duration of pregnancy codes, the code title of O09.5 should be amended to *Duration of pregnancy 34 – <37 completed weeks*. SECOND EDITION

Background:

A number of changes were made to category O24 for consistency with the changes made to the [E10-E14](#) Diabetes mellitus categories.

The descriptors for O24.0 and O24.1 were changed to reflect the updated terminology (*Type 1* and *Type 2*).

The descriptor for O24.2 was changed in line with the deletion of the concept of *malnutrition-related diabetes* from the latest WHO classification. This change represents a concept change for O24.2. A concept change occurs when the meaning of a code or category in a previous edition changes in a later edition. Researchers and data analysts need to be aware, when searching for data relating to O24.2, that the meaning of this code has changed between First and Second Editions.

Two new codes were incorporated into Second Edition at category O24.4 to distinguish whether the diabetes mellitus arising in pregnancy *requires insulin*.

shoulders is facilitated by flexing the mother's hips to increase the pelvic diameter.

An includes note for 'manual removal of placenta' was added to O83 *Single spontaneous delivery* following publication of coding advice that O83 *Other assisted single delivery* should be assigned when manual removal of placenta is performed during a vaginal delivery. For classification purposes the O80-O84 range of codes describe the delivery component of an obstetric episode of care, including expulsion of the placenta. O80 *Single spontaneous delivery* is intended to describe those deliveries with minimal or no assistance. O83 *Other assisted single delivery* describes deliveries with more than minimal assistance, including manual removal of placenta.

P75* Meconium ileus in cystic fibrosis (E84†)

SECOND EDITION

Background:

Cystic fibrosis is the underlying problem in the majority of cases of *meconium ileus*. In ICD-10, the classification of *meconium ileus* reflects this relationship and the disorder can only be coded in an aetiology/manifestation relationship with cystic fibrosis. However, this classification is not appropriate for the 5-10% of cases of meconium ileus that occur in the absence of cystic fibrosis.

Changes were made to the classification following a recommendation from the Australian Collaborating Centre (AIHW/NCCH) at the WHO Meeting of the Heads of Collaborating Centres for the Classification of Diseases in Paris, 1998. In ICD-10, an exclusion note was placed under category E84.1 *Cystic fibrosis with intestinal manifestations* directing the user to P76.0 *Meconium plug syndrome* for cases of meconium ileus where cystic fibrosis is not present.

SEVENTH EDITION**Background:**

National Birth Anomalies Steering Committee in collaboration with the NCCH, organised a series of working parties to add further specificity to the codes within ICD-10-AM Chapter 17 *Congenital malformations, deformations and chromosomal abnormalities*. The Congenital Anomalies Working Party recommended the revision of codes and the creation of fifth characters to meet the specifications of the State Birth Defects Registries.

Q13.1 Absence of iris**SECOND EDITION****Background:**

The term *irideraemi* was reclassified to Q13.2 *Other congenital malformations of iris* to maintain consistency with the WHO classification. The advice to reclassify this term was issued with the Second Errata (September 2000) to the Second Edition and became effective from September 2000.

Further analysis revealed that the term should be classified to Q13.1. WHO corrected the ICD-10 index following a recommendation from Germany at the WHO Meeting of the Heads of Collaborating Centres for the Classification of Diseases in Copenhagen, 1997. The term was therefore reclassified to Q13.1 in ICD-10-AM Fourth Edition.

Each underlying cause of the stridor is classifiable in ICD-10, and following the deletion of Q31.4, a code was created specifically for *laryngomalacia*. SIXTH EDITION**Background:**

A query received by NCCH highlighted an error with some of the fifth character codes in Q53. The fifth character subdivisions for Q53.0 *Ectopic testis* were clinically incorrect, as an ectopic testis is a variant of undescended testis, where the position is outside the normal pathway of descent. The subdivision should only apply to undescended testicle sites within the normal pathway of descent.

VICC suggested that for *bilateral undescended testes*, where each testicle is undescended to a different site, only one code should be assigned to indicate the site most distant from the scrotum.

VICC also suggested that the fifth character 9 *other specified site* was inappropriate as there is no other site in the normal pathway of an undescended testicle, other than those already specified (ie canalicular, inguinal and intra-abdominal).

Consequently, the following amendments were made to Q53:

- the instructional note regarding the fifth character subdivisions was relocated from above Q53.0 to below Q53.0, as it no longer applies to this code
- Q53.00, Q53.01, Q53.01, Q53.02, Q53.03 and Q53.09 were inactivated
- the fifth character 9 *other specified site* was inactivated (hence Q53.19, Q53.29 and Q53.99 were inactivated)
- a note was added under Q53.2 *Undescended testicle, bilateral* to indicate that where each testicle is undescended to a different site, the fifth character denotes the most distant site from the scrotum.

An Australian three character category and eight new codes describing functional level of thoracic spinal cord injury were incorporated into First Edition. These codes classify the *functional level of spinal cord injury*. The functional level of spinal cord injury is defined as the lowest intact spinal segment (eg *complete C4 lesion of spinal cord* means that the functions served by the fourth and higher cervical nerves are intact, and there is no function at lower levels).

FIRST EDITION

Background:

The optional fifth character for category S52 *Fracture of forearm* in the WHO ICD-10 identifies *fractures that are open or closed*. This subdivision was not incorporated into ICD-10-AM as it limits the expansion of the codes to further specify the *site* of the injury. To avoid losing this information, the codes for *open wound* in ICD-10-AM are assigned in addition to the *injury code(s)*, when appropriate.

T20-T31 Burns

FIRST EDITION

Background:

Significant changes were made to this block in ICD-10-AM First Edition.

Corrosions

ICD-10 distinguishes chemical burns from all other burns by classifying them as *corrosions*, because many international countries do not use the codes from Chapter XX to identify the external cause of conditions classified to Chapter XIX. ICD-10 therefore compensates for this by identifying the *aetiological agent* through the distinction between *corrosion* and *other burns*. This distinction is not necessary in Australia, as every condition classified to Chapter XIX must be accompanied by an external cause code from Chapter XX. Therefore, all references (category descriptors, codes, inclusion and exclusion notes) to *corrosion* in the Tabular List were deleted.

Degrees vs thickness

The description of burns as *degrees* is not clinically relevant in Australia as terminology relates to *thickness* of the burn. On the recommendation of the CCCG, the code descriptors specifying *degrees of burns* in this block were replaced with *erythema, partial thickness* and *full thickness*, respectively.

Categories T31 and T32 – body surface involved in burns and corrosions

On the recommendation of the CCCG, a fifth character subdivision for category T31 Burns *classified according to extent of body surface involved* to reflect the same level of specificity classifiable in ICD-9-CM. The subdivision specifies the *percentage of body surface with full thickness burn(s)*.

The WHO ICD-10 category T32 *Corrosions classified according to extent of body surface involved* was not incorporated into ICD-10-AM (see [Corrosions](#), above).

EIGHTH EDITION

Background:

The NCCC received a public submission (P32) concerning the classification and AR-DRG assignment for sunburn. Given that sunburn is a significant health issue and has long term consequence on the skin cancer, the ITG (ICD Technical Group) decided at its meeting on 6 May 2011 that, sunburn requires multiple ICD codes to identify the sunburn site and external causes of injury.

The following changes have been made to ICD-10-AM Tabular List:

- added 'use additional code' instructions to the Tabular List at L55 *Sunburn*:
Use additional code (T20–T25, T29–T30) to identify site of sunburn
Use additional external cause code (Chapter 20) to identify cause
Use additional code (T31) to identify the percentage of body surface area with full thickness burn, if applicable
- removed sunburn (L55.-) from the exclusion list at T20-T31 *Burns*
- modified ACS 1911 *Burns* to clarify the change
- removed L55.- from the list of codes not requiring an external cause in ACS 2001 *External cause code use and sequencing*.

NINTH EDITION

Background:

It was noted during proof reading of Eighth Edition that one of the fifth character subdivisions – “2 chest wall, excluding breast and nipple thorax [external]” at T21 listed below is confusing. However, since amendments to the code title would have impacted both the ECLs and the DRG manual, code titles in T21 were held over for amendment in Ninth Edition.

The following changes were made:

- Deleted the term “excluding breast and nipple thorax [external]” from code title of T21.02 *Burn of unspecified thickness of chest wall, excluding breast and nipple thorax [external]*
- Added inclusion terms specifying thickness of burn of “nipple” at T21.01 *Burn of unspecified thickness of breast*
- Added “nipple” as an inclusion term at fifth character subdivision “1- breast” and at includes note at T21
- Amended fifth character subdivision “2- chest wall, excluding breast and nipple thorax [external]” to “2- chest wall”

NINTH EDITION

Background:

It was noted during proof reading of Eighth Edition that one of the fifth character subdivisions –“ 2 chest wall, excluding breast and nipple thorax [external]” at T21 listed below is confusing. However, since amendments to the code title would have impacted both the ECLs and the DRG manual, code titles in T21 were held over for amendment in Ninth Edition.

The following changes were made:

- Deleted the term “excluding breast and nipple thorax [external]” from code title of T21.02 *Burn of unspecified thickness of chest wall, excluding breast and nipple thorax [external]*
- Added inclusion terms specifying thickness of burn of “nipple” at T21.01 *Burn of unspecified thickness of breast*
- Added “nipple” as an inclusion term at fifth character subdivision “1- breast” and at includes note at T21
- Amended fifth character subdivision “2- chest wall, excluding breast and nipple thorax [external]” to “2- chest wall”

T65.0 Cyanides**FIRST EDITION****Background:**

The drug term *prussic acid* was reclassified to T57.3 *Hydrogen cyanide* following a recommendation from China at the WHO Meeting of the Heads of Collaborating Centres for the Classification of Diseases in Copenhagen, 1997.

The advice to reclassify this term was issued with the First Errata (April 1998) to the First Edition. The change became effective from July 1998.

T66 Unspecified effects of radiation

SIXTH EDITION

Background:

During the Sixth Edition update of ACS 1904 *Procedural complications*, the issue of coding conditions arising as a result of *radiotherapy treatment* was raised. Members of CSAC suggested that there was inconsistent application of codes for these conditions.

Problems with this area of the classification included:

- diagnosis codes for effects of radiation/radiotherapy do not fit neatly into ICD-10-AM concepts of adverse effects or complications, as they may be found in a number of different locations in the Tabular List – for example; unique codes (eg K62.7 *Radiation proctitis*), postprocedural codes (eg M96.5 *Postradiation scoliosis*), inclusion terms (eg G93.8 *Other specified disorders of brain*).
- some codes contain the following instructional note; Use additional external cause code (Chapter 20) to identify radiation, if radiation-induced.
- T66 *Unspecified effects of radiation* is assigned for when the specific type of effect is unknown. This is not a procedural complication code.

The external cause codes for effects of radiation are divided by whether the radiation/radiotherapy is *correctly administered* (Y84.2) or *incorrectly administered* (Y63.2, Y63.3 or Y78.-).

The excludes note at T66 was amended to add further unique diagnosis codes for effects of radiation.

SIXTH EDITION

Background:

A number of queries were received by the NCCH from 3M, questioning the current Alphabetic Index pathways to *complications of nervous system devices, implants and grafts*. A review of this section of ICD-10-AM Tabular List revealed inconsistencies in the structure of the Australian fifth character codes.

In the category T85 *Complications of other internal prosthetic devices, implants and grafts* in WHO ICD-10, the following fourth characters are present:

.0 to .6 for mechanical complications (*breakdown, displacement, leakage* etc), of different types of devices, implants and grafts.

.7 for infection and inflammatory reactions

.8 for other complications (*pain, stenosis, embolism, haemorrhage* etc)

.9 for unspecified complications

In ICD-10-AM, T85.7 is expanded at the fifth character level to include two codes, one for *complications due to peritoneal dialysis catheter* and one for *other devices*. Similarly, T85.8 is expanded to include two codes, one for *other complications of nervous system devices, implants and grafts* and one for *other complications of other devices NEC*.

However, there is an inclusion term *Infection or inflammatory reaction* at T85.81, which under the structure outlined above, is incorrect.

To rectify this error:

- a code was created; T85.72 *Infection and inflammatory reaction due to nervous system device, implant and graft*

SECOND EDITION

Background:

All notes relating to the ICD's primary coding guideline were deleted in Second Edition to avoid confusion for the Australian user. Primary coding refers to situations where the codes are used in single condition morbidity analysis (only one diagnosis code is used to classify an entire episode of care). In Australia, we apply the multiple coding rule and code all conditions relevant to an episode of care.

This change relates to the note on page 892 of ICD-10 and page 375 of the ICD-10-AM Second Edition.

T95 Sequelae of burns and frostbite

FIRST EDITION

Background:

ICD-10 distinguishes *chemical burns* from all other burns by classifying them as *corrosions*. The reason why WHO did this was because many international countries do not use the codes from Chapter XX to identify the external cause of conditions classified to Chapter XIX. ICD-10 compensates for this by identifying the *aetiological agent* through the distinction between *corrosion* and other *burns*. Such a distinction is not necessary in Australia, as every condition classified to Chapter XIX must be accompanied by an external cause code from Chapter XX. Therefore, all references (category descriptors, codes, inclusion and exclusion notes) to *corrosion* in the Tabular List were deleted.

All notes relating to the ICD's primary coding guideline were deleted or revised in the Second Edition. The notes are not relevant in Australia and some conflicted with the Australian Coding Standards.

Changes to the *place of occurrence* and *activity* codes

The NCCH, together with the National Injury Surveillance Unit of the Australian Institute of Health and Welfare, worked together to improve the classification of *place of occurrence* and *activity* when related to the external cause of injury in Second Edition.

In First Edition, *place of occurrence* was assigned as a fourth character subdivision for use with categories W00-Y34 (except for Y06 and Y07). *Activity* was assigned as a fifth character subdivision with categories V01-Y34. In the Second Edition, these concepts were given unique codes (Y92.- for place of occurrence and Y93.- for activity). Implementing unique codes, rather than fourth or fifth character subdivisions, gives greater scope for specificity.

Place of occurrence codes (Y92.-) are assigned with external cause codes V01-Y89. *Activity* codes (Y93.-) are assigned with external cause codes V01-Y34.

The changes to this section of the classification impacted on some 20,000 codes. Consequently, the individual links that are used throughout the Chronicle to designate codes that were created, revised or deleted, were not built for these codes.

Changes to these codes also represent a concept change. A concept change occurs when the meaning of a code or category in a previous edition changes in a later edition. For these changes in Second Edition, it was necessary to inactivate First Edition codes and reactivate them in the Second Edition as a different concept. Researchers and data analysts need to be aware, when searching for data relating to these codes, that the meaning of the codes has changed between First and Second Editions.

2003 *Place of occurrence of external cause of injury*

2006 *Activity related to the external cause of injury*

THIRD EDITION

Background:

The External Causes chapter of ICD-10-AM was amended considerably between the Second and Third Editions.

In ICD-10-AM Third Edition *sports injury and work related injury* are described at a greater level of detail. Other developments reflect changes in patterns of risk (eg the emergence of *four-wheel drives* as common vehicles on Australian roads), recognition that some useful categories were lost in the change from ICD-9-CM to ICD-10-AM (eg *poisoning by motor vehicle exhaust gas*), the need for greater specificity in identifying circumstances of some common types of injury (eg *falls by children from playground equipment*) and the ability to distinguish certain case types that attract interest, though the case frequency may be low (eg *shark attacks*).

All of the changes provided more specific categories by splitting Second Edition external cause categories. The main changes were as follows:

Transport related injuries

ICD-10-AM Second Edition classified *four-wheel drive vehicles* in a way that was appropriate for uncommon, special purpose vehicles - briefly and ambiguously. ICD-10-AM Third Edition classifies *four-wheel drive vehicles* as *cars* (V40-49) and introduces a fifth character classification to distinguish several major types of four-wheel drive vehicles, including *all terrain four-wheel drive* vehicles. This approach also enabled distinction of *people movers* and the much less common but hazardous *quad cycles* and related four-wheeled motor cycles.

Third Edition also provides the ability to distinguish types of *motorcycle*, particularly those designed for *off-road use* (eg *dirt bikes* and on farms *ag bikes*).

Transport related injuries are sometimes recorded as being intentional or of undetermined intent. Previously there was no provision to classify the nature of these events in ICD-10-AM. Third Edition, however, provides a fourth character expansion to enable the counterpart (another vehicle, a fixed object etc) to be classified in these cases.

Falls

In Third Edition a fourth character expansion was used to increase the specificity of information about types of recreational conveyances from which *falls* often occur: W02 *Fall involving ice-skates, skis, roller-skates or skateboards*, W09 *Fall involving playground equipment* and W01 *Fall on same level from slipping, tripping and stumbling* were all expanded to provide greater specificity to the classification.

Sports Injury

In ICD-10-AM Third Edition there was expansion of the list of sports classified to Y93 *Activity* in Second Edition. However, as it was not possible in Third Edition to expand Y93 to fourth and fifth characters, the entire activity classification was relocated to the previously unused range U50-U73. The list of *types of sport* is based on the International Classification of External Causes of Injury (ICECI) version 1.

In addition, a fourth character was added to W21 *Striking against or struck by sports equipment* to better classify circumstances of common sports injury. Finally, the existing category *Sports and athletics area* in Y92 *Place of Occurrence* was expanded to distinguish several types of venue (ie *outdoor sporting grounds, indoor sporting facilities, swimming centres, racetracks, equestrian facilities, skating rinks and skiing facilities*).

Work related injury

ICD-10-AM Third Edition further expanded the *Activity* classification by providing subcategories for *work-related* cases occurring in eight major industry sectors (eg *mining, construction, health services*).

Intentional self harm

A fourth character expansion was added to X67 *Intentional self-poisoning by and exposure to other gases and vapours* to enable classification of *motor vehicle exhaust gas* cases. For consistency, the same capability was provided for accidental poisoning, assault and poisoning of undetermined intent.

Assault

ICD-10-AM Third Edition expanded the classification of *assault* to enable the type of *perpetrator* to be classified in the whole of the assault section rather than just certain categories. Categories include *spouse or domestic partner, parent, carer and person unknown to the victim*.

A fourth character expansion of X99 *Assault by sharp object* was also added to enable distinction of some common (eg *knife, glass*) and high-interest (eg *hypodermic needle*) types of *cutting and stabbing*. For consistency, a parallel fourth character expansion was also added to *self-harm and undetermined intent cases involving a sharp object*.

Machinery

A fourth character expansion was included at W30 *Contact with agricultural machinery* to enable classification of major types of *agricultural machinery* involved in injury. Similar expansion of W31 *Contact with other and unspecified machinery* enabled identification of other types of injury causing machinery.

Animal-related injury

Several changes in Third Edition enabled specific classification of injury resulting from *contact with animals*, including:

- *Biting* distinguished from other types of harm involving *dogs* (eg being *knocked over*).

- *Falls from horses, and falls from other animals*, distinguished from other events in category V80 *Animal-rider or occupant of animal-drawn vehicle injured in transport accident*.
- *Sharks* distinguished from other *marine animals* in W56 *Contact with marine animal* and *platypus* from X27 *Contact with other specified venomous animals*.
- Contact with *snakes* distinguished according to whether the snake is known to be *venomous* (in which case categories are provided for several types), or is known to be *non-venomous*, or its venomous status is unknown – W59 *Bitten or crushed by other reptiles* and X20 *Contact with venomous snakes and lizards*.
- Distinction between types of *arthropods* (eg *funnel web* and *red back spider*, *jumper ants* and *fire ants*).
- Distinctions between types of *venomous marine animals* (eg *box jellyfish*, *stone fish* and *venomous octopus*).

Other Changes

Other changes in ICD-10-AM Third Edition include:

- *Doors* distinguished from other causes of *crushing injury* (eg of fingers) – W23 *Caught, crushed, jammed or pinched in or between objects*
- Drowning and immersion in a spa, Jacuzzi or hot tub distinguished from drowning and immersion in a bath or swimming pool.
- Distinction between injury due to contact with hot drink, hot food and hot fat and cooking oil in X10 *Contact with hot drinks, food, fats and cooking oils*
- Distinction between running hot water (eg from a tap or shower) and contained hot water (eg in a bath) in X11 *Contact with hot tap-water* and distinction between steam from motor vehicle radiators, steam or hot vapours from food, and steam or hot vapour from other sources in X13 *Contact with steam and hot vapours*
- A fifth character expansion for *place of occurrence* codes that allows for distinction of *driveway* from other parts of the home and distinction between *roadway*, *sidewalk* and *cycleway* as parts of *street and highway*. Categories were provided for several types of *residential institutions* (notably *prison* and *aged care facilities*), *sporting facilities* (as noted above), *trade and service areas* (eg *shop and store*, *office building*, *café*, *hotel* and *restaurant*), *industrial and construction areas* (eg *construction area*, *demolition site*, *factory* and *plant*, *mine* and *quarry*) and other places (eg *stream of water*, *beach*, *forest*, *parking lot*).

The changes to category W34 represent a concept change. A concept change occurs when the meaning of a code or category in a previous edition changes in a later edition. For the changes to category W34 in Second Edition, it was necessary to inactivate First Edition codes and reactivate them in the Second Edition with a different concept. Researchers and data analysts need to be aware, when searching for data relating to these codes, that the meaning of the codes changed between First and Second Editions.

Upon review, NCCH determined that it would be valuable to integrate some of the modifications of the RCPCH perinatal chapter into ICD-10-AM.

As part of this review, and on the recommendation of the Neonatal Classification Update Forum (May 2000), one new category and five new Australian codes

were incorporated into Third Edition to reflect the same level of specificity classifiable in ICD-9-CM. The new codes distinguish the suspected condition not found, but observed for, in neonates (eg *infectious, neurological, and respiratory*).

SECOND EDITION

Background:

An Australian three character category (Z06) was incorporated into Second Edition to reflect the same level of specificity classifiable in ICD-9-CM. National frequencies supported the creation of a similar code, with no fourth character breakdown. An inclusion note specifies that the code is intended for use as an additional code to indicate the presence of drug resistance of the infectious organism.

The Australian Collaborating Centre (AIHW/NCCH) tabled these changes at the WHO Meeting of the Heads of Collaborating Centres for the Classification of Diseases in Rio de Janeiro, 2000. These changes are under consideration by the WHO ICD-10 Update Reference Committee.

FOURTH EDITION

Background:

ICD-10-AM does not directly classify *alcoholism in family* and *gambling in family*. However, these conditions were considered important indicators of social problems that may impact on a patient's episode of care and/or length of stay. The NCCH introduced fifth character subdivisions and revised the code title to reflect these changes.

Z75.1 Person awaiting admission to adequate facility elsewhere

THIRD EDITION

Background:

On the basis of a public submission, seven Australian codes were incorporated into Third Edition. The codes distinguish the *facility* to which a patient is awaiting admission (eg *acute hospital, rehabilitation facility, palliative care*).

This information was added to provide useful performance information on integration of care processes as part of the annual Australian Health Care Agreement performance report. Mode of separation data is not a useful proxy, as those waiting placement elsewhere may be discharged home or transferred to another hospital to wait before they go to their final placement [facility].

EIGHTH EDITION

Background:

The jurisdictions and 3M have, over the years, made ad hoc requests for the inclusion of certain morphology codes to reflect changes in behaviour that were not listed in the ECL but which are in line with coding convention which states – “the behaviour code should be changed if the other reported information makes

this appropriate.” To this end the NCCC undertook to review the ICD-10-AM Tabular List - Appendix A: *Morphology of neoplasms*, in conjunction with the Australasian Association of Cancer Registries (AACR) Coding and Reporting Committee.

A query received highlighted the fact that there was an index entry for Myelodysplastic and myeloproliferative disease NOS (C94.6) in ICD-10-AM with no corresponding morphology code. As a result of a task (TN375), “NEC” is to be added at index entry “Carcinoma in situ, non-small cell” for consistency.

The following changes were incorporated into ICD-10-AM Eighth Edition:

- Added the clinically valid morphologies approved by the AACR Coding and Reporting Committee to Appendix A: *Morphology of neoplasms table*
- Added morphology code ‘M9989/3’ at index entry “Disease, myelodysplastic and myeloproliferative NEC”
- Added ‘NEC’ at index entry “Carcinoma in situ, non-small cell”
- Corrected the following incidental findings:
 - deleted incorrect index entry “cystic, partially differentiated (M8959/1) C64” under *Neuroblastoma* and insert this index entry under *Nephroblastoma*
 - amend see reference against index entry “Chemodectoma – see Paraganglioma, nonchromaffin” to “– see Paraganglioma, extra-adrenal”
 - remove “Leydig cell” under index entry “Carcinoma” and add “tumour” to index entry at “Leydig cell”
 - remove “incompletely differentiated” and “mixed” as NEMs at index entry “Tumour, sex cord” and add as sub entries with appropriate morphology codes. Replace default morphology code M8959/1 with M8590/0
 - Inactivate M8244/1 – “Composite carcinoid, uncertain whether benign or malignant” based on clinical advice received
- Refine index entries to clarify code assignment and reduce duplication where possible.
- Correct abbreviations in Appendix A: *Morphology of Neoplasms* for the following morphology codes to:
 - M8072/1 – “Squam cell tum, lrg cell, nonkerat, ub/m”
 - M9684/3 – “Lymph, lrg B-cl, dfs, immunoblastic NOS”
 - M9718/3 – “Prim cutan CD30+ T-cl lymphprol disrd”.

NINTH EDITION

Background:

During the Eighth Edition proof reading, a number of issues were identified with Appendix A – *Morphology of Neoplasms*. Many of the titles included “Malignant” where it was inappropriate and some of the code titles overlapped or didn’t provide detail re behaviour. Following clinical confirmation, code titles were revised and three morphology codes were removed:

The term *malignant* was deleted from the following code titles:

- M8000/2 Neoplasm, in situ
- M8002/1 Tumour, small cell type, uncertain whether benign or malignant
- M8002/2 Tumour, small cell type, in situ
- M8003/1 Tumour, giant cell type, uncertain whether benign or malignant

- M8003/2 Tumour, giant cell type, in situ
- M8004/0 Tumour, spindle cell type, benign
- M8004/1 Tumour, spindle cell type, uncertain whether benign or malignant
- M8005/0 Clear cell tumour NOS Tumour, clear cell type, benign
- M8005/1 Tumour, clear cell type, uncertain whether benign or malignant
- M8005/2 Tumour, clear cell type, in situ

M9766/1 Angiocentric immunoproliferative lesion, uncertain whether benign or malignant

EIGHTH EDITION:

Background:

As part of the WHO 2008 leukaemia/lymphoma updates to Seventh Edition, *lymphoid/lymphomatoid granulomatosis* was reclassified from D47.7 *Other specified neoplasm of uncertain or unknown behaviour* to C83.8 *Other non-follicular lymphoma*. Following clinical advice, the morphology code was

reclassified from M9766/1 *Angiocentric immunoproliferative lesion* to M9766/3 *Angiocentric immunoproliferative lesion*.

There is no extension of /3 for M9766 in the *International Classification of Diseases for Oncology, 3rd Edition* (ICD-O-3) or in ICD-O-2. The WHO process to revise the classification of lymphoid/lymphomatoid granulomatosis in ICD-10 is undertaken independent of the ICD-O process. In late 2004 it was confirmed by the Australasian Association of Cancer Registries (AACR) that *lymphoid/lymphomatoid granulomatosis* requires a behaviour code of /3. The World Health Organization's (WHO) International Agency for Research on Cancer (IARC) has not confirmed that decision.

While the above change was affected in the ICD-10-AM Alphabetic Index, M9766/3 was not included in the Seventh Edition *Morphology of Neoplasms* list in Appendix A of the ICD-10-AM Tabular List. As a result, this code was not included in the Electronic Code List (ECL) and created an error when assigned. NCCC advised the states to amend their ECL to accept M9766/3 for the remainder of the Seventh Edition cycle. M9766/1 was deleted and M9766/3 was created.

Dorzolamide	Anti-glaucoma, carbonic anhydrase inhibitor
Ecstasy	CNS stimulant-hallucinogen, amphetamine type
Efavirenz	Non-nucleoside reverse transcriptase inhibitor (NNRTI) anti-HIV anti-viral
Eformoterol - fumerate dihydrate	Bronchodilator, Beta-2 sympathomimetic agonist
Entacapone	Catechol-O-methyl transferase (COMT) inhibitor (anti-parkinsonism)
Eprosartan	Angiotensin II blocker, anti-hypertensive
Eptifibatide	Antiplatelet
Ertapenem	Antibiotic (carbapenem)
Esomeprazole	Anti-ulcer/reflux – proton pump inhibitors
Etanercept	Immunosuppressant
Exemestane	Inhibitor of steroid synthesis, aromatase inhibitor (prevents conversion of testosterone into oestrogen)
Famciclovir	Antiviral antibiotic
Fexofenadine	Antihistamine
Filgastrim	Colony stimulating factor
Fluvastatin	Cholesterol-lowering (HMG-Co A reductase enzyme inhibitor)
Follitropin (alpha & beta)	Hypothalamic & pituitary hormones (gonadotrophins)
Fondaparinux	Anticoagulant
Fosphenytoin	Antiepileptic
Fuller's earth	Antidote
Gabapentin	Anti-epileptic
Gatifloxacin	Antibiotic (quinolones)
Gemtuzumab ozogamicin	Antineoplastic antibodies
Glimepiride	Antidiabetic/sulfonylureas
Hydroxyethylrutosides	Drug for peripheral vascular disease
Hylans	Joint lubricant
Imatinib	Antineoplastic
Imiquimod	Wart treatment/ calluses (immune response modifier)
Indinavir	Anti-AIDS, protease inhibitor (PI), anti-viral antibiotic
Infliximab	Immunosuppressant antibodies
Irbesartan	Angiotensin II blockers, anti-hypertensive
Irinotecan	Antineoplastic/ topoisomerase inhibitor
Lamivudine	Anti-AIDS, nucleoside analogue, anti-viral antibiotic
Latanoprost	Anti-glaucoma, prostaglandin F2 analogue
Laxative - bulk	Laxative
Leflunomide	Immune modulator/suppressant

Generic name (brand name)	Classification (drug class)
Lercanidipine	Calcium channel blocker, anti-hypertensive and anti-anginal
Letrozole	Inhibitor of steroid synthesis, aromatase inhibitor
Levetiracetam	Antiepileptic
Levobupivacaine	Local anaesthetic
Linezolid	Antibiotic (quinolones)
Lipase (with protease & anylase)	Pancreatic enzyme supplements
Lodoxamide	Antiallergy (eye drops)
Lopinavir (with ritonavir)	Antiviral
Losartan	Angiotensin II blocker, anti-hypertensive
Magnesium sulphate, IV	Pre-eclampsia, eclampsia
Maldison	Scabicide/pediculicide
Meloxicam	NSAID, anti-arthritis
Meropenem	Antibiotic (carbapenem)
Mitrazapine	Anti-depressant, noradrenaline reuptake/serotonin blocker
Modafinil	Neurological disorders
Montelukast	Leukotriene receptor antagonist, anti-asthma medication
Moxifloxacin	Antibiotic (quinolones)
Mycophenolate mofetil	Immunosuppressant
Nadroparin	Anti-coagulant (low molecular weight heparin)
Naratriptan	Anti-migraine
Nefazodone	Anti-depressant, 5-HT ₂ blocker
Nelfinavir	Anti-AIDS, protease inhibitor (PI), anti-viral antibiotic
Nevirapine	Non-nucleoside reverse transcriptase inhibitor (NNRTI) anti-HIV anti-viral
Nicotine – medicinal (oral)	Drugs for nicotine dependence
Nicotine – medicinal (topical)	Drugs for nicotine dependence
Olanzapine	Atypical major tranquilliser, anti-psychotic
Olopatadine	Antiallergy (eye drops)
Orlistat	Anti-obesity (blocks action of lipases – prevents absorption of ingested fat)
Oseltamivir	Anti-influenza, anti-viral
Oxaliplatin	Antineoplastic/ platinum compound
Paclitaxel	Antineoplastic/ taxanes
Palivizumab	Antiviral
Pamidronate	Anti-osteoporosis; biphosphonate; inhibits bone absorption
Pantoprazole	Anti-ulcer, proton-pump inhibitor
Parecoxib	Nsaid
Penciclovir	Anti-viral antibiotic
Pioglitazone	Antidiabetic
Piperazine oestrone sulfate	Oestrogen
Pizotifen	Anti-migraine (prevention, not relief), anti-histamine & serotonin antagonist
Quetiapine	Atypical major tranquilliser, anti-psychotic
Quinupristin (with dalfospristin)	Antibiotic (quinolones)
Rabeprazole	Anti-ulcer, proton-pump inhibitor
Raloxifene	Anti-osteoporosis, selective oestrogen receptor modulator
Raltitrexed	Antineoplastic - antimetabolite
Reboxetine	Antidepressant
Remifentanyl	Synthetic opioid analgesic
Repaglinide	Antidiabetic
Retepase	Thrombolytic
Riluzole	Neurological disorders
Risedronate	Anti-osteoporosis; biphosphonate; inhibits bone absorption
Risperidone	Atypical major tranquilliser, anti-psychotic, benzoxisoazole-type
Ritonavir	Anti-AIDS, protease inhibitor (PI), anti-viral antibiotic

Generic name (brand name)	Classification (drug class)
Rituximab	Antineoplastic antibodies
Rivastigmine	Anti-dementia, cholinesterase inhibitor
Rofecoxib (<i>Vioxx</i>)	NSAIDs
Ropivacaine	Local anaesthetic
Rosiglitazone	Antidiabetic
Saquinavir	Anti-AIDS, protease inhibitor (PI), anti-viral antibiotic
Sevoflurane	Anaesthetic
Sibutramine	Anorectic
Sildenafil (<i>Viagra</i>)	Anti-impotence, phosphodiesterase type 5 inhibitor
Sirolimus	Immunosuppressant
Stavudine	Anti-AIDS, nucleoside analogue, anti-viral antibiotic
Sunscreen	Sunburn prevention
Tacrolimus	Immunosuppressant/calcineurin inhibitor
Tamulosin	Anti-hypertensive, vasodilator, alpha-adrenoceptor blocker
Tazarotene	Topical antiacne
Tegaserod	Serotonin receptor partial agonist (used for irritable bowel syndrome)
Telmisartan	Antihypertensive (angiotensin converting enzyme inhibitor)
Temozolomide	Antineoplastic – alkylating agent
Tenecteplase	Thrombolytic
Tenofovir	Antiviral
Thioxanthenes	Antipsychotic
Tiagabine	Antiepileptic
Tibolone	Hormone replacement therapy, sex hormone
Tiludronate	Anti-osteoporosis; biphosphonate; inhibits bone absorption
Tiotropium	Bronchodilator
Tirofiban	Antiplatelet
Tolterodine	Anticholinergic – for urinary incontinence
Topiramate	Anti-convulsant/anti-epileptic
Topotecan	Antineoplastic/ topoisomerase inhibitor
Trastuzumab	Antineoplastic antibodies
Travoprost	Glaucoma drug (drops)
Tropisetron	Anti-emetic
Tryptophan	Amino acid, hypnotic
Vaccine - pneumococcal - h.influenzae type b (hib) vaccine - varicella	Vaccines
Valaciclovir	Antiviral antibiotic
Valganciclovir	Antiviral
Venlafaxine	Anti-depressant, SNRI type
Verteporfin	Antiallergy (drops)
Wood tar	Eczema drug
Zafirlukast	Leukotriene receptor antagonist, anti-asthmatic
Zanamivir	Anti-influenza, anti-viral antibiotic
Zoledronic acid	Affects calcium homeostasis
Zolmitriptan	Headache drug - 5HT agonist

FIFTH EDITION

Additions to the Table of Drugs and Chemicals:

Generic name (<i>brand name</i>)	Classification (drug class)
Angio-tensin-converting enzyme (ACE)	Predominantly β -adrenoreceptor agonists, not elsewhere classified
Angio-tensin-converting enzyme (ACE) inhibitor	Angiotensin-converting-enzyme inhibitors
Carbon - monoxide - - motor vehicle exhaust	Toxic effect of carbon monoxide
Fumes - carbon monoxide - - motor vehicle exhaust	Toxic effect of carbon monoxide
Gamma hydroxybutyrate (GHB)	Other and unspecified general anaesthetics
Gas - motor - - exhaust - - vehicle exhaust	Toxic effect of carbon monoxide
Motor - exhaust gas - - vehicle exhaust gas	Toxic effect of carbon monoxide
Vaccine NEC - diphtheria - - with tetanus - - - and other specified agents (haemophilus influenza type B, hepatitis B, pertussis, poliomyelitis)	Addition of nonessential modifiers (at three dash level)

Revisions to the Table of Drugs and Chemicals:

Generic name (<i>brand name</i>)	Comments
Digoxine	Deleted as lead term and added to <i>Digoxin</i>
Ethoglucid	Deleted from table – incorrect spelling
Fuel - automotive - - exhaust gas, not in transit	Term <i>not in transit</i> deleted
Gas - motor - - exhaust - - vehicle exhaust, not in transit	Term <i>not in transit</i> deleted
Methacycline hydrochloride (Rondomycin)	Spelling of brand name corrected
Tramadol	Classification changed to <i>Other synthetic narcotics</i>
Vaccine NEC - diphtheria - - with tetanus - - - and - - - - haemophilus influenza type B - - - - - poliomyelitis - - - - - hepatitis B - - - - hepatitis B - - - - poliomyelitis - - - - pertussis - - - - poliomyelitis	Deletion of subterms as essential modifiers (from four dash level) – added as nonessential modifiers (at three dash level)

SIXTH EDITION

Additions to the Table of Drugs and Chemicals:

Generic name (brand name)	Classification (drug class)
Anticonvulsant - deoxybarbiturates	<i>Barbiturates</i>
Benzylpiperazine	<i>Other psychostimulants with potential for use disorder</i>
Bisphosphonates NEC	<i>Other and unspecified drugs, medicaments and biological substances</i>
BZP	<i>Other psychostimulants with potential for use disorder</i>
Deoxybarbiturates	<i>Barbiturates</i>
Fenetylline, fenethyllyne	Addition of <i>fenethyllyne</i> (alternate spelling) to lead term
Methamphetamine - methylenedioxy	<i>Other psychostimulants with potential for use disorder</i>
Methylenedioxy methamphetamine (MDMA)	<i>Other psychostimulants with potential for use disorder</i>
Methylprednisolone - intravenous	<i>Glucocorticoids and synthetic analogues</i>
Vaccine - protozoal	<i>Other and unspecified drugs, medicaments and biological substances</i>
Wood preservative	<i>Pesticide, unspecified</i>

Revisions to the Table of Drugs and Chemicals:

Generic name (brand name)	Comments
Amfetaminil	Reclassified to <i>Other psychostimulants with potential for use disorder</i>
Amphetamine NEC	Reclassified to <i>Other psychostimulants with potential for use disorder</i>
Caffeine	Reclassified to <i>Other psychostimulants with potential for use disorder</i>
Catha (tea)	Reclassified to <i>Other psychostimulants with potential for use disorder</i>
Desoxyephedrine	Reclassified to <i>Other psychostimulants with potential for use disorder</i>
Dexamphetamine	Reclassified to <i>Other psychostimulants with potential for use disorder</i>
Dextroamphetamine	Reclassified to <i>Other psychostimulants with potential for use disorder</i>
Ecstasy (methylenedioxy methamphetamine)	Reclassified to <i>Other psychostimulants with potential for use disorder</i>
Fenetylline, fenethyllyne	Reclassified to <i>Other psychostimulants with potential for use disorder</i>
Khat	Reclassified to <i>Other psychostimulants with potential for use disorder</i>
Meclofenoxate	Reclassified to <i>Other psychostimulants with potential for use disorder</i>
Metamphetamine	Reclassified to <i>Methylamphetamine</i>
Methamphetamine	Reclassified to <i>Methylamphetamine</i>
Methylamphetamine	Reclassified to <i>Methylamphetamine</i>
Methylenedioxyamphetamine	Reclassified to <i>Other psychostimulants with potential for use disorder</i>
Methylphenidate	Reclassified to <i>Other psychostimulants with potential for use disorder</i>
Modafinil	Reclassified to <i>Other psychostimulants with potential for use disorder</i>
Phenazopyridine	Reclassified to <i>Other nonopioid analgesics and antipyretics, not elsewhere classified</i>
Pipradrol	Reclassified to <i>Other psychostimulants with potential for use disorder</i>
Prolintane	Reclassified to <i>Other psychostimulants with potential for use disorder</i>

Generic name (brand name)	Comments
Psychostimulant NEC	Reclassified to <i>Unspecified psychostimulants with potential for use disorder</i>
Tenamphetamine	Reclassified to <i>Other psychostimulants with potential for use disorder</i>
Warfarin - sodium	Subterm deleted

SEVENTH EDITION

Additions to the Table of Drugs and Chemicals:

Generic name (brand name)	Classification (drug class)
Tadalafil	<i>Peripheral vasodilator</i>
Vardenafil	<i>Peripheral vasodilator</i>

Revisions to the Table of Drugs and Chemicals:

Generic name (brand name)	Comments
Antianxiety drug NEC	Adverse effect in therapeutic use reclassified to Y47.9 <i>Sedative, hypnotic and antianxiety drug, unspecified</i>
Cyclobenzamprine	Reclassified to T48.1 (<i>Poisoning by...</i>) <i>Skeletal muscle relaxants [neuromuscular blocking agents]</i> and Y55.1 (<i>Complication of...</i>) <i>Skeletal muscle relaxants [neuromuscular blocking agents]</i>
Ecstasy	Reclassified to T43.62 (<i>Poisoning by ...</i>) <i>Methylenedioxy Methylamphetamine</i>
GHB (gamma hydroxybutyrate)	Reclassified to T41.21 (<i>Poisoning by ...</i>) <i>gamma hydroxybutyrate</i>
ketamine	Reclassified to T41.22 (<i>Poisoning by ...</i>) <i>Ketamine</i>
Methylenedioxy Metamphetamine(MDMA)	Reclassified to T43.62 (<i>Poisoning by ...</i>) <i>Methylenedioxy Methylamphetamine</i>
Sildenafil (Viagra)	Reclassified to T46.7 (<i>Poisoning by...</i>) <i>Peripheral vasodilator</i> and Y52.7 (<i>Complication of...</i>) <i>Peripheral vasodilator</i>
Thallium (compounds)(dust) NEC	Reclassified to T56.8 (<i>Toxic effects of...</i>) <i>Other metals</i>
Trichlorethylene	Reclassified to T53.2 (<i>Toxic effects of...</i>) <i>Trichloroethylene</i>
Trichloroethylene	Reclassified to T53.2 (<i>Toxic effects of...</i>) <i>Trichloroethylene</i>
Trichloroethylene - vapour NEC	Reclassified to T41.0 (<i>Poisoning by...</i>) <i>Inhaled anaesthetics</i>

NINTH EDITION

Revisions to the Table of Drugs and Chemicals:

Generic name (brand name)	Comments
Filgrastim	Typographical error identified and corrected
Helium (nonmedicinal) NEC	Fourth characters added: <i>Poisoning/accidental</i> X47.8 <i>Poisoning/intentional self-harm</i> X67.8

TENTH EDITION

Revisions to the Table of Drugs and Chemicals:

Generic name (brand name)	Comments
---------------------------	----------

Methylated spirit	Reclassified to T51.0 (<i>Toxic effect of Ethanol</i>)
-------------------	--

ELEVENTH EDITION

Revisions to the Table of Drugs and Chemicals:

Generic name (<i>brand name</i>)	Comments
Acetylene	Reclassified to: (<i>Poisoning</i>) X47.1, X67.1, X17.1
Acetylene - industrial	Reclassified to: (<i>Poisoning</i>) X47.3, X67.3, X17.3
Blast furnace gas	Reclassified to: (<i>Poisoning</i>) X47.3, X67.3, X17.3
Butane	Reclassified to: (<i>Poisoning</i>) X47.8, X67.8, X17.8
Butane - combustion	Subterm created
Butane - distributed through pipes	Reclassified to: (<i>Poisoning</i>) X47.8, X67.8, X17.8
Butane - incomplete combustion	Subterm deleted
Carbon - monoxide (from combustion (incomplete))	NEM revised Reclassified to: (<i>Poisoning</i>) X47.4, X67.4, X17.4
Carbon - monoxide - - specified source NEC	Subterm created
Charcoal - fumes (carbon monoxide)	Reclassified to: (<i>Poisoning</i>) X47.2, X67.2, X17.2
Charcoal - fumes - - industrial	Reclassified to: (<i>Poisoning</i>) X47.3, X67.3, X17.3
Coal (carbon monoxide from)	Reclassified to: (<i>Poisoning</i>) X47.2, X67.2, X17.2
Coke fumes or gas (carbon monoxide)	Reclassified to: (<i>Poisoning</i>) X47.2, X67.2, X17.2
Coke fumes or gas - industrial use	Reclassified to: (<i>Poisoning</i>) X47.3, X67.3, X17.3
Combustion gas	Reclassified to: (<i>Poisoning</i>) X47.8, X67.8, X17.8
Corrosive - fumes NEC	Reclassified to: (<i>Poisoning</i>) X47.8, X67.8, X17.8
Domestic gas	Reclassified to: (<i>Poisoning</i>) X47.8, X67.8, X17.8
Exhaust gas	Reclassified to: (<i>Poisoning</i>) X47.0, X67.0, X17.0
Formalin (vapour)	Reclassified to: (<i>Poisoning</i>) X47.8, X67.8, X17.8
Fuel - industrial (from combustion (incomplete))	NEM revised Reclassified to: (<i>Poisoning</i>) X47.3, X67.3, X17.3
Fumes - carbon monoxide	Reclassified to: (<i>Poisoning</i>) X47.4, X67.4, X17.4
Fumes - charcoal	Reclassified to: (<i>Poisoning</i>) X47.2, X67.2, X17.2
Fumes - coke	Reclassified to: (<i>Poisoning</i>) X47.2, X67.2, X17.2
Fumes	Reclassified to: (<i>Poisoning</i>) X47.8, X67.8, X17.8

- corrosive NEC	
Fumes - specified source NEC	Reclassified to: (<i>Poisoning</i>) X47.9, X67.9, X17.9
Furnace (coal burning) (domestic), gas from industrial	Reclassified to: (<i>Poisoning</i>) X47.2, X67.2, X17.2
Gas - acetylene	Reclassified to: (<i>Poisoning</i>) X47.1, X67.1, X17.1
Gas - blast furnace	Reclassified to: (<i>Poisoning</i>) X47.3, X67.3, X17.3
Gas - carbon monoxide	Reclassified to: (<i>Poisoning</i>) X47.4, X67.4, X17.4
Gas - coal	Reclassified to: (<i>Poisoning</i>) X47.2, X67.2, X17.2
Gas - combustion (incomplete) NEC	Subterm created
Gas - domestic	Reclassified to: (<i>Poisoning</i>) X47.8, X67.8, X17.8
Gas - exhaust	Reclassified to: (<i>Poisoning</i>) X47.0, X67.0, X17.0
Gas - from utility (for cooking NEC, heating or lighting)	NEM revised Reclassified to: (<i>Poisoning</i>) X47.1, X67.1, X17.1
Gas - from wood- or coal-burning stove or fireplace	Reclassified to: (<i>Poisoning</i>) X47.2, X67.2, X17.2
Gas - fuel (domestic use)	Reclassified to: (<i>Poisoning</i>) X47.2, X67.2, X17.2
Gas - incomplete combustion, any	Subterm deleted
Gas - kiln	Reclassified to: (<i>Poisoning</i>) X47.3, X67.3, X17.3
Gas - motor - - exhaust	Reclassified to: (<i>Poisoning</i>) X47.0, X67.0, X17.0
Gas - natural	Reclassified to: (<i>Poisoning</i>) X47.8, X67.8, X17.8
Gas - producer	Reclassified to: (<i>Poisoning</i>) X47.8, X67.8, X17.8
Gas - refrigerant (chlorofluorocarbon)	Reclassified to: (<i>Poisoning</i>) X46, X66, X16
Gas - sewer	Reclassified to: (<i>Poisoning</i>) X47.8, X67.8, X17.8
Gas - specified source NEC	Reclassified to: (<i>Poisoning</i>) X47.9, X67.9, X17.9
Gas - water	Reclassified to: (<i>Poisoning</i>) X47.1, X67.1, X17.1
Insecticide NEC	Reclassified to: (<i>Toxic effect</i>) T60.2
Insecticide	Reclassified to: (<i>Toxic effect</i>) T60.2

- mixed	
Kiln gas or vapour (carbon monoxide)	Reclassified to: (<i>Poisoning</i>) X47.3, X67.3, X17.3
Lung irritant (gas) NEC	Reclassified to: (<i>Poisoning</i>) X47.8, X67.8, X17.8
Monoxide, carbon	Reclassified to: (<i>Poisoning</i>) X47.4, X67.4, X17.4
Motor - exhaust gas	Reclassified to: (<i>Poisoning</i>) X47.0, X67.0, X17.0
Natural gas - combustion (incomplete)	Subterm/NEM revised Reclassified to: (<i>Poisoning</i>) X47.1, X67.1, X17.1
Oil - fumes	Reclassified to: (<i>Poisoning</i>) X47.8, X67.8, X17.8
Phencyclidine	Reclassified to: (<i>Poisoning</i>) T40.9, X42, X62, X12
Propane (distributed in mobile container)	Reclassified to: (<i>Poisoning</i>) X47.8, X67.8, X17.8
Propane - combustion (incomplete)	Subterm created
Propane - incomplete combustion	Subterm deleted
Sewer gas	Reclassified to: (<i>Poisoning</i>) X47.8, X67.8, X17.8
Smog	Reclassified to: (<i>Poisoning</i>) X47.8, X67.8, X17.8
Utility gas NEC	Lead term revised Reclassified to: (<i>Poisoning</i>) X47.8, X67.8, X17.8
Utility gas - carbon monoxide	Subterm created
Vapour - kiln (carbon monoxide)	Reclassified to: (<i>Poisoning</i>) X47.3, X67.3, X17.3
Vapour - specified source NEC	Reclassified to: (<i>Poisoning</i>) X47.9, X67.9, X17.9
Water - gas	Reclassified to: (<i>Poisoning</i>) X47.1, X67.1, X17.1

Supplementary information for ICD-10-AM

(First to Third Editions)

Supplementary listing of new codes, deleted codes & concept changes to the diabetes mellitus codes (E10-E14) for ICD-10-AM Second Edition

E10 Type 1 diabetes mellitus

DELETED CODES

E10.0	Insulin-dependent diabetes mellitus with coma
✱E10.00	Insulin-dependent diabetes mellitus with coma, not stated as uncontrolled
✱E10.01	Insulin-dependent diabetes mellitus with coma, stated as uncontrolled
✱E10.10	Insulin-dependent diabetes mellitus with ketoacidosis, not stated as uncontrolled
✱E10.11	Insulin-dependent diabetes mellitus with ketoacidosis, stated as uncontrolled
✱E10.20†	Insulin-dependent diabetes mellitus with renal complications, not stated as uncontrolled
✱E10.21†	Insulin-dependent diabetes mellitus with renal complications, stated as uncontrolled
✱E10.30†	Insulin-dependent diabetes mellitus with ophthalmic complications, not stated as uncontrolled
✱E10.31†	Insulin-dependent diabetes mellitus with ophthalmic complications, stated as uncontrolled
✱E10.40†	Insulin-dependent diabetes mellitus with neurological complications, not stated as uncontrolled
✱E10.41†	Insulin-dependent diabetes mellitus with neurological complications, stated as uncontrolled
✱E10.50	Insulin-dependent diabetes mellitus with peripheral circulatory complications, not stated as uncontrolled
✱E10.51	Insulin-dependent diabetes mellitus with peripheral circulatory complications, stated as uncontrolled
✱E10.60	Insulin-dependent diabetes mellitus with other specified complications, not stated as uncontrolled
✱E10.61	Insulin-dependent diabetes mellitus with other specified complications, stated as uncontrolled
✱E10.70	Insulin-dependent diabetes mellitus with multiple complications, not stated as uncontrolled
✱E10.71	Insulin-dependent diabetes mellitus with multiple complications, stated as uncontrolled
✱E10.80	Insulin-dependent diabetes mellitus with unspecified complications, not stated as uncontrolled

- ☛E10.81 Insulin-dependent diabetes mellitus with unspecified complications, stated as uncontrolled
- ☛E10.90 Insulin-dependent diabetes mellitus without complications, not stated as uncontrolled
- ☛E10.91 Insulin-dependent diabetes mellitus without complications, stated as uncontrolled

CREATED CODES

CONCEPT CHANGES

A concept change occurs when the meaning of a code or category in a previous edition changes in a later edition. For the changes to the diabetes mellitus codes in the Second Edition, it was necessary to delete First Edition codes and reintroduce them in the Second Edition as a different concept.

Researchers need to be aware, when searching for data relating to the following codes, that the meaning of the codes has changed between First and Second Editions.

- ☛E10.11 Insulin-dependent diabetes mellitus with ketoacidosis, stated as uncontrolled (**1sted**)
- ☛E10.11 Type 1 diabetes mellitus with ketoacidosis, without coma (**2nded**)

- ☼E10.21† Insulin-dependent diabetes mellitus with renal complications, stated as uncontrolled (**1sted**)
- ☼E10.21 Type 1 diabetes mellitus with incipient diabetic nephropathy (**2nded**)
- ☼E10.31† Insulin-dependent diabetes mellitus with ophthalmic complications, stated as uncontrolled (**1sted**)
- ☼E10.31 Type 1 diabetes mellitus with background retinopathy (**2nded**)
- ☼E10.41† Insulin-dependent diabetes mellitus with neurological complications, stated as uncontrolled (**1sted**)
- ☼E10.41 Type 1 diabetes mellitus with diabetic mononeuropathy (**2nded**)
- E10.5 Insulin-dependent diabetes mellitus with peripheral circulatory complications (**1sted**)
- E10.5 Type 1 diabetes mellitus with circulatory complication (**2nded**)
- ☼E10.51 Insulin-dependent diabetes mellitus with peripheral circulatory complications, stated as uncontrolled (**1sted**)

CONCEPT CHANGES

A concept change occurs when the meaning of a code or category in a previous edition changes in a later edition. For the changes to the diabetes mellitus codes in the Second Edition, it was necessary to delete First Edition codes and reintroduce them in the Second Edition as a different concept.

Researchers need to be aware, when searching for data relating to the following codes, that the meaning of the codes has changed between First and Second Editions.

- ☼E11.01 Non-insulin-dependent diabetes mellitus with coma, stated as uncontrolled (1sted)
- ☼E11.01 Type 2 diabetes mellitus with hyperosmolarity without nonketotic hyperglycaemic-hyperosmolar coma [NKHHC] (2nded)
- ☼E11.11 Non-insulin-dependent diabetes mellitus with ketoacidosis, stated as uncontrolled (1sted)
- ☼E11.11 Type 2 diabetes mellitus with ketoacidosis, without coma (2nded)
- ☼E11.21† Non-insulin-dependent diabetes mellitus with renal complications, stated as uncontrolled (1sted)
- ☼E11.21 Type 2 diabetes mellitus with incipient diabetic nephropathy (2nded)
- ☼E11.31† Non-insulin-dependent diabetes mellitus with ophthalmic complications, stated as uncontrolled (1sted)
- ☼E11.31 Type 2 diabetes mellitus with background retinopathy (2nded)
- ☼E11.41† Non-insulin-dependent diabetes mellitus with neurological complications, stated as uncontrolled (1sted)
- ☼E11.41 Type 2 diabetes mellitus with diabetic mononeuropathy (2nded)
- E11.5 Non-insulin-dependent diabetes mellitus with peripheral circulatory complications (1sted)
- E11.5 Type 2 diabetes mellitus with circulatory complication (2nded)
- ☼E11.51 Non-insulin-dependent diabetes mellitus with peripheral circulatory complications, stated as uncontrolled (1sted)
- ☼E11.51 Type 2 diabetes mellitus with peripheral angiopathy, without gangrene (2nded)
- ☼E11.61 Non-insulin-dependent diabetes mellitus with other specified complications, stated as uncontrolled (1sted)
- ☼E11.61 Type 2 diabetes mellitus with diabetic musculoskeletal and connective tissue complication (2nded)
- ☼E11.71 Non-insulin-dependent diabetes mellitus with multiple complications, stated as uncontrolled (1sted)
- ☼E11.71 Type 2 diabetes mellitus with multiple microvascular complications (2nded)
