

IHACPA

Independent Health and Aged Care Pricing Authority

**ICD-10-AM/ACHI/ACS
Twelfth Edition**

Errata 5

For implementation

1 July 2023

How to use this document

The ICD-10-AM/ACHI/ACS classification system is used for classifying admitted patient care and comprises the following:

- International Statistical Classification of Diseases and Related Health Problems, Tenth Revision, Australian Modification (ICD-10-AM)
- Australian Classification of Health Interventions (ACHI)
- Australian Coding Standards (ACS).

For the published hardcopy books, ICD-10-AM/ACHI/ACS errata may be issued to correct errors and typographical issues that have been identified since the time of publishing. Users are required to incorporate these corrections when using the published hardcopy books.

This document lists corrections to be made to each of the hardcopy books listed in the following order:

- ICD-10-AM Tabular List
- ICD-10-AM Alphabetic Index
- ACHI Tabular List
- ACHI Alphabetic Index
- Australian Coding Standards

Each correction includes:

- The hardcopy book with a page reference
- Instructions to correct codes or terms (eg add, delete, amend)
- The corrected text without track changes detailed in a grey box
- The existing text with track changes detailed in a white box (eg [added text](#), ~~deleted text~~)

Example of correction

Page #	Add/Delete/Amend <i>Instructional</i> note/code(s)/term(s), and Add/Delete/Amend <i>Instructional</i> note/code(s)/term(s) <i>Corrected text.</i>
CODE ▽ 0000	<i>Incorrect</i> <i>Corrected</i> text .

ICD-10-AM Tabular List

Australian Coding Standards (ACS)

Page 77	Delete cross reference:
	<ul style="list-style-type: none">• appropriate ACHI code(s) to indicate the treatment for the non-neoplastic condition
0206	PHARMACOTHERAPY FOR NEOPLASMS
	... CLASSIFICATION ...
	Same-day episodes of care ...
	Simultaneous pharmacotherapy for neoplasms and conditions other than neoplasms
	Where pharmacotherapy is administered for a neoplasm and non-neoplastic condition (ie a condition other than a neoplasm) (see Example 3), assign codes in the following sequence:
	<ul style="list-style-type: none">• <i>Z51.1 Pharmacotherapy session for neoplasm</i> as principal diagnosis• additional diagnosis code(s) for the neoplasm(s) (see also ACS 0236 <i>Neoplasm coding and sequencing</i>)• additional diagnosis code(s) for other condition(s) in accordance with ACS 0002 <i>Additional diagnoses</i>• ACHI code(s) from block [1920] with extension - 00 <i>Antineoplastic agent</i>• appropriate ACHI code(s) to indicate the treatment for the non-neoplastic condition (see also ACS 0042 <i>Procedures normally not coded</i>)

Amend example:

EXAMPLE 3:

Patient with breast cancer and anaemia was admitted for same-day chemotherapy and iron infusion. Intravenous (IV) Doxorubicin was administered. The patient was also administered an IV iron infusion for their anaemia.

Codes: Z51.1 *Pharmacotherapy session for neoplasm*
 C50.9 *Malignant neoplasm of breast, unspecified part*
 M8000/3 *Neoplasm, malignant*
 D64.9 *Anaemia, unspecified*
 96199-00 [1920] *Intravenous administration of pharmacological agent, antineoplastic agent*
 96199-19 [1920] *Intravenous administration of pharmacological agent, other and unspecified pharmacological agent*

In this example, simultaneous pharmacotherapy is administered and includes treatment for a neoplasm (chemotherapy for breast cancer) and treatment for a non-neoplastic condition (iron infusion for anaemia). Z51.1 is assigned as a principal diagnosis and C50.9 and D64.9 are assigned as additional diagnoses. 96199-00 [1920] is assigned to identify intravenous administration of pharmacotherapy agents for neoplasm. 96199-19 [1920] is assigned for the iron infusion. See also ACS 0233 *Morphology*.

EXAMPLE 3:

Patient with breast cancer [and anaemia](#) was admitted for same-day chemotherapy [and iron infusion](#). Intravenous (IV) Doxorubicin was administered. The patient was also ~~transfused with two units of packed cells for anaemia:~~ [administered an IV iron infusion for their anaemia](#).

Codes: Z51.1 *Pharmacotherapy session for neoplasm*
 C50.9 *Malignant neoplasm of breast, unspecified part*
 M8000/3 *Neoplasm, malignant*
 D64.9 *Anaemia, unspecified*
 96199-00 [1920] *Intravenous administration of pharmacological agent, antineoplastic agent*
~~13706-02 [1893] *Administration of packed cells*~~
 96199-19 [1920] *Intravenous administration of pharmacological agent, other and unspecified pharmacological agent*

In this example, simultaneous pharmacotherapy is administered and includes treatment for a neoplasm (chemotherapy for breast cancer) and treatment for a non-neoplastic condition (~~packed cells iron infusion~~ for anaemia). Z51.1 is assigned as a principal diagnosis and C50.9 and D64.9 are assigned as additional diagnoses. 96199-00 [1920] is assigned to identify intravenous administration of pharmacotherapy agents for neoplasm. ~~13706-02 [1893] is assigned to identify administration of packed cells:~~ [96199-19 \[1920\] is assigned for the iron infusion](#). See also ACS 0233 *Morphology*.
