

# Appendix D - Adult rehabilitation impairment groups (Weighted FIM™ Motor Score 13-18)

There are two Australasian Rehabilitation Outcomes Centre (AROC) impairment group reference tables used in classifying admitted adult rehabilitation overnight episodes as set out in Figure 1. This appendix is the reference table for episodes with weighted FIM™ Motor Score 13-18.

Figure 1. Adult rehabilitation impairment groups - Reference table overview

To determine the AN-SNAP V5.0 adult rehabilitation impairment groups, the AROC impairment code should be truncated to get the impairment integer for impairments other than Orthopaedic (e.g. 3.9 truncates to 3). For Orthopaedic impairments the impairment code should be truncated to one decimal place (e.g. 8.231 truncates to 8.2).

The table below maps the truncated AROC impairment code and group name to the AN-SNAP V5.0 adult impairment group for episodes with weighted FIM™ Motor Score 13-18.

# Appendix E - Adult rehabilitation impairment groups (Weighted FIM™ Motor Score $\geq 19$ )

There are two Australasian Rehabilitation Outcomes Centre (AROC) impairment group reference tables used in classifying admitted adult rehabilitation overnight episodes as set out in Figure 2. This appendix is the reference table for episodes with weighted FIM™ Motor Score equal to or greater than 19.

Figure 2. Adult rehabilitation impairment groups - Reference table overview

To determine the AN-SNAP V5.0 adult rehabilitation impairment groups, the AROC impairment code should be truncated to get the impairment integer for impairments other than Orthopaedic (e.g. 3.9 truncates to 3). For Orthopaedic impairments the impairment code may be truncated to one decimal place (e.g. 8.112 truncates to 8.1) or may be used in full and not truncated (e.g. 8.232 is not truncated).

The table below maps the truncated AROC impairment code and group name to the AN-SNAP V5.0 adult impairment group for episodes with weighted FIM™ Motor Score equal to or greater than 19.

<sup>1</sup> Four diagnosis codes are excluded conditionally depending on other diagnoses assigned in the episode. Conditional exclusions have been identified for particular aetiology (†) and manifestation (\*) pairs of codes in scope for the FRIC. In these cases, the aetiology code is excluded from being assigned a FRIC score whenever the manifestation code is present as per the following Conditional Exclusion Table.

Note: FIM 13 (Stairs) is unweighted in AN-SNAP V5.0 due to the majority of episodes across various impairments groups having a FIM 13 (stairs) score of 1 (for example, 94.74% of episodes within Amputation of limb have a FIM 13 (stairs) score of 1).

### Weighted FIM™ Motor Groups

AN-SNAP V5.0 retains the same groups established in AN-SNAP V4.0 to ensure adequate episodes for the FIM™ Motor weight calculation. Impairments that are grouped together in the classification adopted the same FIM™ Motor weights. The impairment types are outlined in Table 3 and are categorised within the following groupings:

Group 1	Arthritis, burns, congenital deformities, other disabling impairments, developmental disabilities and COVID conditions
Group 2	Pain syndromes, cardiac and pulmonary
Group 3	Orthopaedic fractures, post-surgery and soft tissue injury
All other impairment types were treated independently due to a sufficient volume of episodes used to determine the FIM™ Motor weights.	

Group 1 captures the impairment groups with low episode volume to obtain a meaningful set of FIM™ Motor weights. Group 2 was developed after a clinical subgroup recommendation of combining 'Pain, cardiac and pulmonary' impairment types into a single class in AN-SNAP V4.0. This recommendation was supported by subsequent statistical analysis. Group 3 captures all the orthopaedic impairment types due to the clinical similarity of treatment and conditions.
